

# EXXAT ONE JOBS

## Employer-Side Hiring Product

360° Research Report · UX Journey Analysis · Competitive Benchmarking  
Cursor Prompt for Product Development

Prepared for: Ashutosh Gupta · Exxat · May 2026

### 1. 360° Exxat Ecosystem Analysis

#### 1.1 What Exxat Is Today

**Exxat is the dominant clinical and experiential education platform for allied healthcare in the United States, trusted by 1,300+ programs across 550+ academic institutions, 4,000+ clinical partners (sites), and 200,000+ students. The company operates three interconnected products:**

Exxat Prism — The school-side platform managing curriculum, fieldwork, assessments, competency-based education, placement coordination, and accreditation readiness across PT, OT, SLP, Nursing, PA, RT, Radiology, and other disciplines.

Exxat One — The shared network layer connecting students, schools, and clinical sites. Manages placement requests, onboarding workflows, compliance documentation, scheduling, and — as of 2026 — job discovery and early-career hiring.

Exxat Approve — The compliance and credentialing verification product ensuring sites and students meet HIPAA/FERPA-compliant documentation requirements.

**Exxat's April 2026 launch of 'Jobs on Exxat One' is the pivotal move that transforms the platform from a placement management system into a full-lifecycle career network — bridging clinical education directly to first employment.**

**STRATEGIC INSIGHT:** Exxat occupies a uniquely defensible position: it is the *ONLY* platform that holds school-verified clinical rotation data, preceptor evaluations, and placement histories for healthcare students — information that general job boards simply cannot replicate. This is the product's moat.

#### 1.2 Target Audiences & Motivations

| Hospital / Site Admin (Recruiter)    | Posts jobs, reviews applicants, manages pipeline | Find verified new-grad talent efficiently   | Reduce time-to-hire, cut agency spend, build pipeline from rotations |
|--------------------------------------|--------------------------------------------------|---------------------------------------------|----------------------------------------------------------------------|
| Site Preceptor / Clinical Supervisor | Evaluates students during rotations              | Document student performance accurately     | Support student career transition; flag top performers               |
| Student / New Grad                   | Builds profile, discovers and applies to jobs    | Land first clinical job aligned to training | Career continuity; reduce job search anxiety                         |
| School Admin / Program Coordinator   | Manages placements, tracks outcomes              | Visibility into student outcomes            | Improve placement rates; support accreditation metrics               |
| Alumni                               | Continues job search post-graduation             | Retain platform access after graduation     | Keep career trajectory moving with trusted data                      |

### 1.3 The Unique Data Advantage

***Exxat's unfair competitive advantage for the employer product lies entirely in its verified data layer:***

Rotation History — every site a student trained at, duration, and specialty setting (outpatient, acute care, pediatrics, etc.)

Preceptor Evaluations — clinical supervisor assessments of student performance — not self-reported  
'Recommend to Hire' Flag — a preceptor's first-party signal that a student is hire-ready; no general platform has this

Credential & Compliance Records — immunizations, background check equivalents, license eligibility (NPTE), CPR/BLS, all FERPA/HIPAA compliant

School Affiliation + Program Quality — verified accreditation data for each academic program

Network Affinity Score — whether a student's rotation history overlaps with a hiring employer's own clinical site

## 2. Healthcare Hiring Landscape: Past → Present → AI Era

### 2.1 How Healthcare Hiring Has Been Done (Pre-2020)

***Traditional healthcare hiring for new graduates followed a highly manual, relationship-driven process:***

Career fairs at academic institutions — schools bussed students to hospital-organized events

Direct outreach by facility HR to program directors — "warm pipeline" referrals

Generic job boards (Indeed, Monster, CareerBuilder) — low clinical context, high screening burden

Staffing agencies — expensive (15–25% of annual salary per placement), but efficient for volume

Rotation-to-hire pipeline — hospitals would observe student performance and extend offers pre-graduation (the strongest signal, but not systematized)

Paper-based credential verification — physically gathering transcripts, license verifications, immunization records (60–120 day process)

### 2.2 The 2020–2025 Digital Shift

***COVID-19 accelerated digital transformation in healthcare recruitment:***

LinkedIn became the dominant sourcing channel, but healthcare candidates are passive — they don't actively maintain LinkedIn profiles

Healthcare-specific boards emerged: Health eCareers, Vivian, GHR, ProHealth, AMN — but still lacked clinical context

ATS adoption grew: iCIMS captured healthcare enterprise; Workday, Greenhouse, Lever entered mid-size hospitals

Video interviews became standard, reducing geographic barriers for initial screening

Nursing shortages hit crisis levels (22%+ annual turnover) — hospitals became desperate for new pipeline sources

Candidate ghosting spiked 31% as candidates moved faster than hiring timelines could accommodate

### 2.3 The AI Era: 2025–2030 Hiring

***The hiring landscape is undergoing a fundamental architectural shift driven by AI. Key changes:***

Resume Screening → Semantic Skill Matching

***Traditional keyword ATS is giving way to embedding-based semantic matching. LinkedIn's Hiring Assistant (GA September 2025) reduced profile review time by 62% and saved 4+ hours per role. Phenom's Fit Score, iCIMS AI, and Workday AI all now rank candidates by semantic similarity to job requirements — not just keyword overlap.***

Passive Sourcing → Proactive Candidate Identification

**AI tools can now identify candidates who haven't applied but match a role's requirements ("hidden talent discovery"). For healthcare new grads, this means hospitals can be notified of graduating students who match their criteria before job postings even go live.**

Manual Scheduling → Conversational AI

**Paradox's Olivia AI handles 80%+ of interview scheduling autonomously in healthcare, responding within 2 minutes. Candidates who receive responses within 72 hours are significantly more likely to complete the process; 31% ghosting rate is the penalty for slower systems.**

Credential Verification → Pre-Verified Candidate Pools

**The 60–120 day credentialing timeline is the #1 bottleneck in healthcare hiring. Platforms that offer pre-verified candidate data (like Exxat's Prism-synced profiles) reduce this friction dramatically. In the AI era, the winning platform will compress credentialing from months to days.**

Post-Application Bias → Skills-First, Bias-Mitigated Ranking

**AI matching removes name/school/demographic bias from initial screening by normalizing embeddings to pure skill dimensions. Healthcare has historically favored prestigious school names — AI levels this playing field for underrepresented new grads.**

**STRATEGIC OPPORTUNITY:** The future of healthcare hiring is: proactive identification of verified, pre-credentialed candidates from trusted training pipelines — BEFORE they apply. Exxat One is positioned to be the platform where hospitals find tomorrow's workforce while they are still in training today.

## 2.4 Key AI Hiring Statistics (2025–2026)

|                                |                                                                                  |                                    |
|--------------------------------|----------------------------------------------------------------------------------|------------------------------------|
| AI hiring speed improvement    | 26% faster time-to-hire with AI tools                                            | SmartRecruiters                    |
| LinkedIn Hiring Assistant      | 62% fewer profiles reviewed, 4+ hrs saved per role, 69% higher InMail acceptance | LinkedIn                           |
| Candidate response expectation | 62% of candidates expect response within 72 hours                                | Metaview/GoodTime                  |
| Candidate ghosting increase    | 31% spike when hiring is slow                                                    | GoodTime 2025                      |
| Recruiter time saved by AI     | ~20% of work week (1 full day)                                                   | LinkedIn Future of Recruiting 2025 |
| Healthcare credential delay    | 60–120 days average credentialing time                                           | Verisys, MedTrainer                |
| New grad job applications      | Average 23 applications before getting hired                                     | Indeed                             |
| Healthcare nursing turnover    | 22%+ annually — driving constant new grad demand                                 | Multiple sources                   |
| Allied health growth           | 15–20% workforce growth projected by 2032                                        | BLS                                |
| Physician shortage forecast    | 124,000 physician + 200,000 nurse shortage by 2033                               | AAMC/BLS                           |

## 3. Simulated New-Grad Healthcare Hiring Journey

**The following simulates a real hiring scenario: Memorial Regional Hospital (a 400-bed acute care hospital in Dallas, TX) needs to hire 3 new-graduate Physical Therapists for their inpatient rehabilitation unit. Their current recruiter, Sarah Chen, is managing 12 open**

*requisitions simultaneously.*

### 3.1 The Hiring Parameters (What Employers Actually Evaluate)

***Healthcare employers — especially large health systems — evaluate new grads across a complex matrix of hard and soft parameters:***

#### Hard Parameters (Eliminators)

License Status / Eligibility: Is the candidate NPTE-eligible or licensed? State-specific license required (PT license in Texas). First priority filter.

Graduation Date: Most new-grad programs only consider candidates within 12–19 months of graduation (e.g., Stanford's nurse residency: 19-month window)

Accreditation: Graduate of a CAPTE-accredited PT program (for PT), ACOTE (for OT), ASHA CAA (for SLP)

Required Certifications: BLS/CPR certification, immunization records, TB test, flu shot, background check clearance

Practice Setting Match: Candidate's rotation experience must include relevant setting (inpatient rehab, acute care, outpatient, pediatric, etc.)

Geographic Availability: Must be able to work at specific hospital location (or willing to relocate)

Employment Eligibility: US work authorization

#### Soft Parameters (Differentiators)

Rotation Site Quality: Did the student rotate at a recognized, high-acuity facility? Memorial specifically values students who rotated at Level 1 trauma centers.

Preceptor Evaluation Scores: What grades/evaluations did the student receive? A "Recommend to Hire" flag from a preceptor is gold.

Specific Clinical Skills: For inpatient rehab PT: gait training, therapeutic exercise, neurological rehab, ADL training, mobility assessment, transfer training, Epic/Cerner EMR documentation.

School Program Reputation: University of Texas Southwestern, Texas Woman's University, and similar regionally prominent programs carry more weight in Texas markets.

Communication & Soft Skills: Assessed during phone screen and interviews — critical in patient-facing roles.

Prior Rotations at Same Facility: "Internal rotation candidate" — someone who already trained at Memorial — is the #1 conversion rate driver. Trust is already established.

Cultural Fit / Values Alignment: Mission-driven hospitals (non-profit systems) particularly weight this.

Compensation Expectations: Most new-grad PT salaries in Dallas: \$62,000–\$75,000. Candidates expecting significantly higher self-select out.

Shift/Schedule Flexibility: Inpatient rehab requires weekend coverage. Candidates willing to work rotating weekends have a significant advantage.

Bilingual Capability: Dallas market — Spanish-speaking PT new grads command premium and are highly sought after.

### 3.2 The Employer Hiring Journey (Step-by-Step with Pain Points)

#### Stage 1: Need Identification & Job Requisition

***Sarah's manager informs her of 3 PT openings. She must create a job req in Workday, get it approved by HR, and push it to job boards.***

Gap: Creating the same job on Workday, Indeed, LinkedIn, and any specialized healthcare boards = 45–90 min of duplicate data entry.

Pain: Job descriptions are generic — HR legal reviews them to death, stripping out the specific clinical requirements that would attract the right candidates.

AI Opportunity: Auto-generate JD from role title + department + prior successful hires' profiles.

#### Stage 2: Multi-Channel Sourcing

***Sarah posts on Indeed, LinkedIn, and the hospital career site. She also calls the PT program directors at UT Southwestern and TWU.***

Gap: Program directors are overwhelmed and referrals are informal — no system tracks 'school relationship quality' over time.

Pain: Indeed/LinkedIn applicants are frequently under-qualified or outside the local area, creating screening waste.

AI Opportunity: Proactive identification of Exxat-profiled students in Dallas who match the role's requirements — before they even apply.

### Stage 3: Application Screening

***Applications arrive in Workday ATS. Sarah manually reviews 60–80 resumes over 3 days. She checks: license eligibility, graduation date, rotation experience.***

Pain: 40–60% of inbound applications fail basic eliminators (not licensed in TX, wrong graduation date, no inpatient experience).

Gap: There is NO verified clinical data on resumes. "3-month rotation at XYZ Hospital" is self-reported — Sarah can't verify quality or depth.

AI Opportunity: Exxat-verified rotation data eliminates this uncertainty. A profile synced from Prism has school-validated rotation records.

### Stage 4: Phone Screening

***Sarah calls 15 candidates for 20-minute screens: license status, salary expectations, start date, and a brief behavioral screen.***

Pain: 30% of candidates ghost or can't be reached within 72 hours. These are lost.

Gap: No structured scoring — Sarah uses gut feel and handwritten notes.

AI Opportunity: AI-assisted pre-screening questionnaire sent immediately after application. Responses scored against the role. Sarah only calls the top 8.

### Stage 5: Clinical Interview

***5 candidates interview with the Rehab Director. Scenario-based clinical questions, competency assessment, facility tour.***

Pain: Scheduling 5 interviews across 3 physicians and a department director = 3–5 days of calendar tetris.

Gap: Interviewers don't have access to the candidate's actual clinical evaluations — they're interviewing blind.

AI Opportunity: Show interviewers the candidate's preceptor evaluation highlights before the interview. Smart interview guide based on skill gaps.

### Stage 6: Reference & Credential Verification

***HR initiates background check, primary source verification of NPTE license, school transcript, immunization records, CPR card.***

CRITICAL PAIN: This step takes 60–120 days. Candidates often accept other offers during this window.

Gap: Every hospital doing this independently — massive industry-wide waste.

AI/Platform Opportunity: Exxat already holds verified credentials, Prism-synced rotation records, and compliance documents. Pre-verified candidates skip 80% of this step.

### Stage 7: Offer & Acceptance

***Offer extended: \$68,000 base + benefits. Candidate has 48 hours to decide.***

Pain: Candidate is simultaneously at Stage 5 with 2 other hospitals. Speed of offer matters enormously.

Gap: No signal of candidate's competing interest level. Is she talking to Banner Health too?

Opportunity: Exxat engagement signals (saved jobs, multiple views) indicate candidate urgency.

## Stage 8: Onboarding

### ***New hire starts. 2-week hospital orientation + department-specific onboarding.***

Gap: Hospital has no connection to the student's academic training record — onboarding is duplicative.

Opportunity: Exxat profile contains training history, competency records — onboarding can be personalized and accelerated.

## 3.3 The Student's Parallel Journey (Same Timeline)

### ***At the same time, Alex Chen, a PT student at TWU graduating in May 2026, is experiencing:***

**Month -4 (Final Clinical Rotation):** Alex is on his last rotation at a Dallas outpatient clinic. His preceptor mentions that Memorial is a great inpatient facility if he wants to go that route. No formal connection is made.

**Month -3 (Spring of Graduation Year):** Alex starts his job search. He posts on LinkedIn, applies to 5–8 jobs on Indeed. Gets zero responses. Anxiety spikes.

**Month -2:** School career services hosts a career fair. Alex meets Memorial's recruiter (Sarah!) but she already has 60 business cards. His resume goes into a pile.

**Month -1 (Graduation):** NPTE board exam is in 6 weeks. Alex is focused on studying, not applying. He doesn't want to apply to jobs he can't start immediately anyway.

**Month 0 (Post-Graduation):** NPTE results take 3–6 weeks. Alex is in limbo — most hospitals won't formally interview pre-licensure. He applies to 15 more jobs.

**Month +1 (Licensed):** Alex has his Texas PT license. He now has 23 applications out. 4 responses, 2 phone screens, 1 interview offer from Memorial (who found him via Exxat).

**Month +2 (Job Start):** Alex accepts Memorial's offer. But his TWU career services portal (Handshake) and his academic record are now inaccessible after graduation. He starts fresh.

**THE GAP EXXAT CLOSES:** *Alex's biggest gap: He rotated at Memorial's sister facility (Texas Health Arlington Memorial — same system) and got outstanding evaluations. His preceptor whispered 'you should apply at Memorial.' But that signal was completely lost. On Exxat, this connection is the product.*

## 4. Competitive Benchmarking

### 4.1 Competitor Overview Matrix

| Handshake<br>(joinhandshake.com) | Campus recruiting, all industries | Job posting, brand page, screening questions, AI messaging, 600+ school network | AI messaging, applicant filtering, predictive targeting | Low — no clinical verification, no healthcare focus | Medium — dominant in campus segment, but not healthcare-specialized                                                   |
|----------------------------------|-----------------------------------|---------------------------------------------------------------------------------|---------------------------------------------------------|-----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| Pickle<br>(withpickle.com)       | Healthcare recruiting OS          | Workflow automation, agency spend reduction, ATS integration                    | Hiring intelligence and automation                      | High — healthcare-only, built for health systems    | High — closest to Exxat's space, but focuses on experienced hires and staffing, not new grads from education pipeline |

|                         |                                    |                                                                                          |                                                                                 |                                                           |                                                                                 |
|-------------------------|------------------------------------|------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|-----------------------------------------------------------|---------------------------------------------------------------------------------|
| LinkedIn Recruiter      | All professional markets           | AI Hiring Assistant, InMail campaigns, job posting, 1B+ profile network                  | 62% fewer profiles reviewed; 69% higher InMail acceptance; predictive AI search | Low — no clinical credential verification                 | Medium — dominant reach but zero verified clinical data advantage               |
| Braintrust              | Tech freelance talent              | Job posting, AI matching, 0% talent fees, 15% client fee                                 | AI job description + candidate matching                                         | None — tech talent focus, not relevant                    | Low — different market entirely                                                 |
| iCIMS                   | Enterprise ATS (healthcare strong) | Full ATS pipeline, analytics dashboard, AI candidate matching, credentialing integration | AI resume screening, Fit Score, talent cloud                                    | High — healthcare-specific integrations, compliance tools | Medium — Exxat must integrate with iCIMS, not compete. Partnership opportunity. |
| sympplr Recruiting      | Healthcare ATS                     | HRIS-integrated, credentialing, compliance workflow                                      | Limited AI currently                                                            | Very High — healthcare-only ATS                           | Low — ATS system, Exxat is the sourcing layer on top                            |
| Indeed / ZipRecruiter   | General mass-market job boards     | Self-serve job posting, sponsored listings, resume database                              | AI job matching (basic)                                                         | Low — no clinical context                                 | Low — commodity sourcing Exxat can outcompete on quality                        |
| AMN Healthcare / Vivian | Healthcare staffing                | Traveler/shift staffing marketplace, not new-grad focused                                | Limited                                                                         | Very High                                                 | Low — staffing not hiring; different model                                      |
| RippleMatch             | Campus recruiting, diversity focus | Automated campus outreach, AI matching, employer dashboard                               | AI campus targeting, automated outreach                                         | Low — not healthcare-specific                             | Low-Medium — campus model similar to Handshake                                  |

## 4.2 Handshake Deep Dive — UX Patterns Worth Adopting

### ***Handshake is the gold standard for new-grad hiring UX. Key employer-side patterns:***

**Employer Brand Page:** Employee-generated content auto-surfaces on the employer brand page — creates authentic candidate view without extra work from HR.

**AI-Assisted Direct Messaging:** Auto-pulls job details, candidate profile, and resume to generate personalized outreach in seconds. Dramatically increases response rate.

**Screening Questions in Application Flow:** Collect graduation date, work authorization, location preference upfront — eliminates unqualified applications before they hit the pipeline.

**Signal-Based Targeting:** Employers can target students based on major, graduation year, GPA range, and engagement signals with the employer's brand page.

**'Apply Direct' vs 'ATS Redirect':** Clean UX distinction between jobs that accept applications on platform vs. redirect to ATS. Reduces candidate confusion.

**Hiring Trends Reports:** Handshake publishes annual data on hiring trends to create perceived authority and drive employer adoption.

**EXXAT ADVANTAGE:** Handshake's biggest weakness: ZERO clinical verification. An OT student's Handshake profile says '3-month rotation at Boston Medical Center.' An Exxat profile has the actual preceptor evaluation, skill competency ratings, and supervisor's 'Recommend to Hire' flag. This is not a feature gap — it's a category gap.

#### 4.3 Pickle Deep Dive — Operational Model to Learn From

***Pickle positions itself as 'The Operating System for Healthcare Recruiting' — notable framing. Key patterns:***

Hiring Intelligence Layer: Pickle doesn't replace ATS — it sits above it, providing analytics, workflow, and intelligence.

Agency Spend Reduction: Key employer pain point — hospitals spend 15–25% of salary on agency placements. Pickle offers direct sourcing to cut this cost. Exxat can make the same value prop.

Compounding Recruiting Capabilities: The platform gets smarter with every hire — building institutional memory of which sources, schools, and backgrounds produce the best long-term hires.

Healthcare-First Compliance: Built for healthcare compliance from day one — a trust signal Exxat already has through Prism.

#### 4.4 LinkedIn Recruiter Deep Dive — AI Features to Benchmark Against

Hiring Assistant (GA Sept 2025): Agentic AI that autonomously sources, filters, and messages candidates. Charter customers reviewed 62% fewer profiles.

AI-Assisted Search (2025): Natural language search queries converted to structured filters — 'Find PT new grads in Dallas within 25 miles graduating in 2026' works.

AI Follow-Ups (Feb 2026): Auto-drafts follow-up messages based on candidate response patterns.

Verified Applicant Spotlight: Highlights candidates who have verified certain credentials — directionally similar to what Exxat's Prism integration provides but far less clinical depth.

Candidate Engagement Signals: Tracks who viewed your company page, engaged with posts, or is 'Open to Work' — behavioral intent signals.

**MONETIZATION SIGNAL:** LinkedIn's model reveals the revenue ceiling: LinkedIn Recruiter seats cost \$8,000–\$10,000/year per recruiter. Healthcare-specialized, verification-backed platforms can command a premium over this. Exxat's pricing power comes from reducing credentialing timelines and improving hire quality.

### 5. Pattern Synthesis: UX, Marketing, Tech & Conversion

#### 5.1 UX Patterns That Drive Conversion

Pattern 1: Dashboard-First Information Architecture

***Every successful recruiting platform leads with a command center dashboard. The employer should know within 10 seconds: How many active jobs? How many new applicants? Which jobs need attention? Which candidates are strongest?***

iCIMS and Workday: Top-of-page KPI cards (Active Jobs, New Applications, Pipeline Health)

Greenhouse: Clean list view with stage progression visible at a glance

Exxat Prescription: KPI cards → AI Insights card → Jobs Needing Attention → Recently Active Candidates

Pattern 2: Job Creation with AI Assist

***No recruiter wants to type a job description from scratch. The fastest-growing pattern is AI-draft-from-prompt:***

Input: Job title + department + 3–5 key requirements → AI generates full JD

Input: Upload existing PDF/Word JD → AI parses and populates all fields

Input: Paste a competitor's job URL → AI extracts and reformats

Exxat Opportunity: Additionally offer 'Clone from successful hire' — use profile of last hired PT to auto-generate requirements.

#### Pattern 3: Candidate Cards with Smart Signals

***The candidate card is the most-viewed UI element in any ATS. Best-in-class cards show:***

Match Score % prominently (top right, color-coded: green/yellow/orange)

Rotation Highlight: 'Trained at Texas Health Arlington' — clickable for preceptor eval detail

Key Differentiator Tags: 'Recommend to Hire', 'Prior Intern', 'Bilingual (Spanish)', 'NPTE Passed'

Engagement Signal: 'Viewed your job 3 times', 'Saved your job'

Freshness: 'Available to start June 2026'

#### Pattern 4: Pipeline Kanban with Contextual Actions

***Kanban-style pipeline (Applied → Screened → Interviewed → Offered → Hired) is the standard, but the best implementations add:***

Drag-and-drop with confirmation prompt (prevents accidental stage changes)

AI Shortlisting Button: 'Move top 5 matches to Screened' — one click

Bulk Actions: Select 10 candidates, send same email template to all

Stage-triggered automations: Moving to 'Screened' auto-sends 'Thanks for applying, we'd like to speak' message

#### Pattern 5: Contextual AI Insights (Not a Separate Dashboard)

***The best AI implementations surface insights inline, not on a separate 'Analytics' page that nobody visits:***

On the Job Listing page: 'This job has 12% fewer applications than similar roles — consider adding relocation assistance to the benefits section'

On the Candidate Profile: 'Alex's rotation at Texas Health (same system) produced a 4.8/5 preceptor evaluation — top 10% of all candidates'

On the Dashboard: 'Your PT pipeline is running low. 3 new matching graduates from TWU posted profiles this week.'

#### Pattern 6: Dual-View Job Management (Exxat-Managed vs ATS-Synced)

***The distinction between jobs an employer created on Exxat vs. synced from their ATS must be visually clear but operationally seamless:***

Exxat-Managed: Full editing control, full pipeline management, all analytics

ATS-Synced: Read-only job details, Exxat-specific discovery analytics (views, saves, click-outs), plus internal notes/tags

Visual indicator: Small ATS logo badge (Workday/iCIMS icon) on synced jobs

## 5.2 Marketing & Messaging Patterns

### Platform Positioning That Works

Handshake: 'The career network for the AI economy' — forward-looking, platform-first messaging

Pickle: 'The Operating System for Healthcare Recruiting' — positions as infrastructure, not a tool

LinkedIn: 'Find, attract, and hire the people who will transform your company' — outcome-focused

Exxat Prescription: 'The trusted talent pipeline from clinical training to your workforce.' — emphasizes trust + continuity + clinical context

### UX Copy Patterns That Convert

Specificity over generality: '3 candidates from your rotation partners match this job' > 'We found matches for you'

First-person benefit framing: 'Your PT pipeline is growing 18% week-over-week' > 'Platform analytics updated'

Social proof with numbers: 'Top 500 allied health programs trust Exxat One' > 'Trusted by leading institutions'

Urgency without pressure: 'Alex Chen's NPTE results just cleared — now available to hire' > 'New candidate available'

### 5.3 Conversion Optimization Signals

|                                     |                                                |                                                                                                      |
|-------------------------------------|------------------------------------------------|------------------------------------------------------------------------------------------------------|
|                                     |                                                |                                                                                                      |
| Employer creates first job          | Is this their first post?                      | Celebrate with a 'Your job is live!' animation + show estimated candidate reach                      |
| Job gets first application          | First applicant                                | Push notification: 'Your first applicant just applied for [Job Title]'                               |
| High-fit candidate identified       | Match >85% not yet applied                     | Dashboard card: 'Alex Chen (92% match) hasn't applied yet — invite to apply'                         |
| Job underperforming                 | Low views/applications vs. benchmark           | Inline alert on job card + AI suggestion (e.g., 'Adding salary range increases applications by 40%') |
| Rotation-to-hire opportunity        | Student rotated here + job matches             | Special badge: 'Prior Rotation Candidate' + auto-suggest this candidate to recruiter                 |
| Candidate about to accept elsewhere | Multiple job saves + recent activity elsewhere | AI nudge: 'Alex has been active on 4 job listings this week — consider fast-tracking'                |
| Post-hire outcome tracking          | Hire marked as 'Hired' in pipeline             | Prompt: 'How did Alex perform in onboarding? Rate your hire quality' (feeds ML model)                |

## 6. Internal Documents Analysis: What Matters for the Employer Build

***Based on the PRDs, here are the most strategically important requirements for the employer-side product:***

### 6.1 Employer Personas & Differentiation

Large Hospitals with ATS (iCIMS, Workday, Bullhorn, Lever): Primary use of Exxat = distribution channel + discovery layer. They post jobs via ATS feed, and Exxat surfaces the right new-grad candidates. Key value: access to verified talent that can't be sourced elsewhere.

Small/Mid-Size Clinics without ATS: Primary use of Exxat = full job management platform. They create, manage, and track all hiring on Exxat. Key value: professional, healthcare-specific hiring tools they couldn't afford as standalone ATS licenses.

The 'Recommend to Hire' Flag is unique: Preceptors can flag outstanding students directly from the Prism placement module. This creates a proprietary first-party intent signal that no competitor can replicate.

### 6.2 Job Creation Flow (Prioritized)

***From the PRD, the job creation workflow must support four creation modes, ordered by frequency of use:***

AI-Generated from Prompt: Describe the role + AI fills the full JD. Most valuable for time-pressed recruiters.

Upload/URL Import: Paste existing JD from another system or a competitor URL.

Manual Creation: Full form for custom requirements.

Clone from Existing: Duplicate a previous successful posting with modifications.

### 6.3 The Employer Dashboard (Jobs Landing Page) — 10-Second Rule

***The PRD specifies: 'Within 10–15 seconds, admins should know: how many jobs are active, whether they're attracting applicants, which jobs need immediate attention, which are underperforming, and whether any applicants are waiting for review.'***

***This is the product's primary success metric for employer engagement. The dashboard must be scannable at a glance, with AI-synthesized insights from 'Leo' (Exxat's AI assistant) providing***

*narrative intelligence.*

#### 6.4 ATS Integration Model — Critical Architecture Decision

***The PRD defines two ATS integration modes:***

MVP: XML feed import of active jobs + Application Redirect (candidate clicks 'Apply on Company Site' and is sent to ATS). Simple, fast to build, lowest risk.

Post-MVP: Hosted Apply via ATS API (candidate applies within Exxat, application synced to ATS). Full bi-directional, requires per-ATS engineering work.

***Priority ATS integrations for MVP: iCIMS, Workday. Future: Greenhouse, Lever, Bullhorn, SmartRecruiters.***

#### 6.5 Recommendation Engine Architecture (Employer Side)

***The PRD specifies a sophisticated AI+ML recommendation engine with three embedding types:***

Candidate Embeddings: Built from full profile, rotation history, skills, certifications, 'Recommend to Hire' flag

Job Embeddings: Built from JD, requirements, skills, salary, discipline, location, site preferences

Site/Facility Embeddings: Built from facility description, specialization, past intern history, hiring patterns

***Weighted matching formula:  $0.55 \times \text{sim}(\text{Job}, \text{Candidate}) + 0.25 \times \text{sim}(\text{Candidate}, \text{Site}) + 0.20 \times \text{sim}(\text{Behavior}, \text{Candidate})$***

***The 'Recommend to Hire' flag and prior rotation history at the hiring site should receive elevated weighting in Phase 1 before ML model training data accumulates.***

#### 6.6 Key Metrics (from PRD)

|                              |                                                  |                                                           |
|------------------------------|--------------------------------------------------|-----------------------------------------------------------|
| Active Jobs                  | Total open jobs (Exxat + ATS mirrored)           | Platform health and supply indicator                      |
| Candidate Reach              | Views + saves + apply clicks                     | Upper-funnel engagement health                            |
| Pipeline Health              | Stage distribution of all applicants             | Conversion and bottleneck identification                  |
| Candidate Discipline Mix     | % breakdown by PT/OT/SLP/ Nursing/PA etc.        | Supply vs. demand alignment for employer's specific needs |
| School/Program Concentration | Top 5 feeder schools for employer's roles        | Signals which academic partnerships to deepen             |
| Interest-to-Apply Rate       | Click-to-apply conversion                        | Job posting quality indicator                             |
| Recommended-to-Hire Rate     | % of hires that came through recommendation flag | Platform's unique value proof point                       |

### 7. Master Cursor Prompt: Building the Exxat One Employer Jobs Product

***The following is a complete, step-by-step cursor prompt designed for development in your existing Next.js codebase with the Exxat DS design system. Use this prompt in a single Cursor session with your exxat-ds skill active.***

**PREREQUISITE:** Before starting: Ensure your exxat-ds skill is loaded in Cursor. All components, tokens, and patterns must follow the Exxat DS specification. Read SKILL.md before generating any code.

#### CURSOR PROMPT — PART 1: Context & Architecture Brief

*You are building the Employer-Side Job Management product for Exxat One (exxatone.com) — a healthcare*

*clinical talent network that connects verified new-graduate healthcare professionals with hospitals and clinical sites in the United States.*

#### PRODUCT CONTEXT:

Platform: Next.js with Exxat DS design system (follow all Exxat DS patterns from SKILL.md)

User: Site Admins / HR Recruiters at hospitals and clinical sites

Two employer types: (A) Large hospitals WITH ATS (iCIMS, Workday) — use Exxat primarily for candidate discovery; (B) Small/mid clinics WITHOUT ATS — use Exxat for full job management

Key differentiator: Exxat holds school-verified clinical rotation data, preceptor evaluations, and 'Recommend to Hire' flags — data that no general job board has

AI Assistant: "Leo" — Exxat's AI layer that provides smart insights inline throughout the product

#### CORE MODULES TO BUILD (in order):

1. Job Management Dashboard (Landing Page)
2. Jobs List View
3. Create Job Flow (AI-Assisted, Upload, Manual, Clone)
4. Job Details Page (with Applicant Pipeline)
5. Candidate Repository / All Candidates View
6. Candidate Profile View (Employer Perspective)
7. Site Profile (Enhanced Employer Profile)
8. Analytics & Insights Views

#### DESIGN PRINCIPLES TO FOLLOW:

Information density: Recruiters are power users — show more data, fewer clicks

10-second rule: Employer should know everything critical within 10 seconds of landing on dashboard

Trust signals: Always surface verification badges (Prism-verified, License Confirmed, Recommend to Hire)

AI-first but not AI-dependent: Leo insights are additive, not mandatory — product must work without them

Healthcare-specific language: Use clinical terminology (discipline, rotation, preceptor, credentialing, licensure)

Mobile-responsive: Recruiters review on mobile between meetings

#### NAVIGATION STRUCTURE TO IMPLEMENT:

Sidebar navigation item: "Job Management"

Sub-items:

- Overview (Dashboard)
- Job Postings
- Candidates

All pages should use the Exxat DS SidebarLayout component, PageHeader component, and appropriate page-level components from the design system.

## CURSOR PROMPT — PART 2: Job Management Dashboard

*BUILD: Job Management Dashboard (Overview Page)*

Route: /site/jobs/overview

This is the most critical page — recruiters land here first. It must answer 5 questions in under 10 seconds:

1. How many jobs are currently active?
2. Are those jobs attracting candidates?
3. Which jobs need immediate attention?
4. Which jobs are underperforming?
5. Are there candidates waiting for review?

PAGE LAYOUT (top to bottom):

SECTION 1 — KPI Summary Cards (4 cards in a row)

Use Exxat DS KPI/stat card component with the following cards:

Card 1: "Active Jobs" — total count (Exxat-managed + ATS-synced). Sub-label: "[X] Exxat · [Y] ATS"

Card 2: "Candidates This Week" — count of new applications + recommended. Sub-label: "[X] New · [Y] Recommended"

Card 3: "Jobs in Draft" — count of unpublished drafts. CTA: "Continue editing →"

Card 4: "Avg. Time to Review" — median days from application to first recruiter action. Trend indicator (↑↓)

#### SECTION 2 — Leo AI Insights Card (full width)

Use Exxat DS insight/callout card component in "Leo" variant (blue gradient left border, Leo avatar icon)

Show 3 rotating AI insights, each with an action CTA:

Insight A: "12 new candidates in the last 7 days match your Physical Therapy job's required skills. [View Matches →]"

Insight B: "3 students who completed rotations at your facility have applied to active jobs. [Review Priority Candidates →]"

Insight C: "Your PT job posted 18 days ago is receiving 35% fewer views than similar jobs. [See Improvement Tips →]"

#### SECTION 3 — Jobs Performance Overview

Use Exxat DS bar chart / engagement chart component

Chart: Grouped bar chart showing Views / Clicks / Applications per job (last 7 days)

Title: "Job Engagement (Last 7 Days)"

Each bar labeled with abbreviated job title

Show benchmark line: "Avg. across similar jobs"

#### SECTION 4 — Two-column layout:

LEFT (60%): "Needs Attention" Section

Use Exxat DS alert list or action items component

Show items requiring action, each with icon + label + CTA:

"5 applications pending review for Physical Therapist - Inpatient Rehab [Review →]"

"Job 'Occupational Therapist - Pediatric' has 0 applications in 14 days [Get Tips →]"

"2 drafts not yet published [Publish →]"

"Job 'Staff RN - ICU' expires in 3 days [Renew →]"

Items should be ordered by urgency (days since action required).

RIGHT (40%): "Recently Posted Jobs" Section

Show last 3–4 job cards (compact variant):

Each card: Job title | Status chip (Active/Draft/Closed) | Posted date | Quick link [View →]

ATS-synced jobs show small ATS badge icon

#### SECTION 5 — Quick Action Bar (bottom of page or sticky footer)

Primary actions: [+ Post a Job] [View All Jobs] [View All Candidates] [Discover Candidates]

#### INTERACTION DETAILS:

All KPI cards are clickable → link to respective filtered views

Leo insights are dismissible (X button) and reload with next insight

"Improvement Tips" modal opens inline with specific AI-generated suggestions for that job

Page should auto-refresh data every 5 minutes silently

## CURSOR PROMPT — PART 3: Jobs List View

### *BUILD: Jobs List View*

Route: /site/jobs/postings

This page shows all jobs ever created by this employer. Recruiters use it to manage their full job inventory.

#### PAGE HEADER:

Page title: "Job Postings"

Summary chips: "18 Active · 3 Draft · 7 Closed"

Primary CTA: [+ Post a Job] button (Exxat DS primary button, rightmost)

Secondary CTA: [Export] button

FILTER BAR (collapsible):

Search input: "Search by job title, ID, or location"

Filter chips/dropdowns:

Status: All | Active | Draft | Paused | Closed

Job Type: All | Full-Time | Part-Time | Contract | Per Diem

Discipline: All | PT | OT | SLP | Nursing | PA | RT | Radiology | Other

Source: All | Exxat-Managed | ATS-Synced

Date Posted: Any | Last 7 days | Last 30 days | Custom range

TABLE / LIST VIEW:

Use Exxat DS data table component with the following columns:

Col 1: Job Title (linked, opens Job Details page) + ATS badge if applicable

Col 2: Job ID (monospace font, copy-on-click)

Col 3: Location (City, State)

Col 4: Discipline (discipline chip)

Col 5: Status chip (color-coded: green=Active, yellow=Draft, red=Closed, orange=Paused)

Col 6: Posted On date

Col 7: Expires On date (red if within 7 days)

Col 8: Views (number)

Col 9: Applications (number, bold if > 0)

Col 10: Actions dropdown (Edit | Pause | Close | Duplicate | Delete)

Row interactions:

Click anywhere on row (except Actions) → opens Job Details

Hovering row shows quick-action icons: [ Preview] [ Edit] [ Duplicate]

Multi-select checkboxes on left → enables bulk actions: Pause selected | Close selected | Export selected

EMPTY STATE (no jobs yet):

Centered illustration (Exxat DS empty state component)

Heading: "No job postings yet"

Sub-text: "Start building your pipeline by posting your first job. It takes less than 5 minutes with Leo's AI assistance."

CTA: [Post Your First Job]

PAGINATION: Show 25 rows per page, Exxat DS pagination component at bottom

## CURSOR PROMPT — PART 4: Create Job Flow (Multi-Mode)

*BUILD: Create / Edit Job Flow*

Route: /site/jobs/create (modal-based or full-page)

This is one of the most important UX moments in the product. A recruiter's first job post sets the tone for their experience. Make it feel fast, intelligent, and effortless.

STEP 0 — CREATION MODE SELECTOR (Modal or Page Header):

Show 4 creation methods as large card options (2x2 grid):

Card 1: "🌟 AI-Assisted" — "Describe the role in plain language — Leo will draft the full job posting"

Card 2: "🔗 Upload / Import" — "Upload an existing JD or paste a job URL — Leo will parse and populate"

Card 3: "👉 Create Manually" — "Fill in all fields yourself with a guided form"

Card 4: "📄 Clone Existing" — "Start from one of your previous job posts"

STEP 1 — AI INPUT (if AI-Assisted selected):

Full-width text area: "Describe this role to Leo"

Placeholder: "e.g., We need a new-grad Physical Therapist for our inpatient rehab unit in Dallas. They need experience with stroke rehab and gait training, and must be NPTE-eligible in Texas. Full-time, starts June 2026."

[Generate Job Posting →] button

Leo then auto-populates all fields below.

Show subtle loading state with "Leo is drafting your job posting..." text.

After generation: Show all fields pre-filled with a banner: "Leo generated this draft — review and edit any field before publishing."

## STEP 2 — JOB DETAILS FORM:

Use Exxat DS form components throughout. Fields:

Job Title\* (text input with suggestions dropdown — show top titles for selected discipline)

Discipline\* (dropdown: PT | OT | SLP | Nursing | PA | RT | Radiology | Allied Health)

Job Type\* (multi-select chips: Full-Time | Part-Time | Contract | Per Diem)

Location\* (city/state autocomplete using nominatim API)

Salary Range (optional — two inputs: min/max + frequency dropdown: Per Hour | Per Week | Per Month | Per Year)

→ Show AI insight inline: "Jobs with salary ranges receive 40% more applications. The typical new-grad PT range in Dallas is \$62K–\$74K annually."

## STEP 3 — JOB DESCRIPTION (rich text):

Sections (collapsible, each with AI enhance button):

Job Summary (required)

Key Responsibilities (bulleted, AI can expand)

Requirements (bulleted — separate: Required vs. Preferred)

→ Required: PT license in Texas (or eligibility), CAPTE-accredited program, BLS/CPR

→ Preferred: Epic EMR experience, bilingual Spanish, inpatient experience

Work Environment / Shift Information

Benefits & Perks (structured chips: Health Insurance | 401k | Tuition Reimbursement | Loan Assistance | PTO | Parental Leave | Wellness | Relocation Assistance)

## STEP 4 — APPLICATION SETTINGS:

Apply Method: Exxat-managed (default) | Redirect to ATS | External URL

Screening Questions (optional): Add up to 5 questions. Pre-built options:

→ "Are you eligible to work in the United States?"

→ "What is your expected graduation date?"

→ "Have you passed or scheduled the NPTE?"

→ "Are you licensed or eligible for licensure in [State]?"

→ "What is your expected start date?"

→ [+ Add custom question]

Required Documents: CV/Resume (default) | Cover Letter (optional) | Other

## STEP 5 — PUBLISH SETTINGS:

Visibility: Public (all students) | Partner Schools Only

Expiration: Never | Specific Date | Auto-close after hiring

Post to (checkboxes): Exxat One Job Board | [connected ATS name]

## STEP 6 — PREVIEW & PUBLISH:

Side-by-side preview (recruiter form on left, student-facing job card preview on right)

"This is how your job will appear to students on Exxat One"

[Save as Draft] | [Publish Job]

On publish: Animated confirmation — 🎉 Your job is live! We'll notify matching students immediately."

Show: "Estimated reach: ~340 matching PT students in the Dallas area"

## CURSOR PROMPT — PART 5: Job Details Page (with Applicant Pipeline)

*BUILD: Job Details Page*

Route: /site/jobs/[jobId]

This page is the recruiter's command center for a single job. It must answer 3 questions instantly:

1. What is this job? (metadata + description)
2. What's happening with it? (activity, pipeline, analytics)
3. What actions can I take? (review candidates, edit, close)

PAGE HEADER:

Job title (H1), Location, Job Type chip, Discipline chip  
 Status chip (Active/Draft/Paused/Closed) with dropdown to change status inline  
 Action buttons (right-aligned): [Edit Job] [Pause] [Close] [Duplicate] [Share Link]  
 ATS badge if ATS-synced (shows ATS name and "Synced from [ATS Name]" with last sync timestamp)

TAB NAVIGATION (below header):

Tabs: Overview | Applicants | Recommendations | Activity

## TAB 1: OVERVIEW

Sub-section A — Job Performance Metrics (KPI row):

Views (total)  
 Applications (total)  
 Interest Rate (applications / views %)  
 Avg. Match Score (average match% of applicants)  
 Days Active

Sub-section B — Leo Insights Card:

"60% of applicants are still in the 'Applied' stage — review top matches to accelerate your pipeline."

"Your PT role in Dallas is attracting 28% fewer new-grad applicants than similar jobs. Consider adding relocation assistance."

"5 candidates from your partner schools (TWU, UT Southwestern) have applied — these typically have 30% higher offer acceptance rates."

Sub-section C — Engagement Chart:

Line chart: Views and Applications over time (last 30 days)

Sub-section D — Benefits Extracted Section:

AI-extracted benefits from JD, displayed as chips in categories:

Health: Medical Insurance | Dental | Vision  
 Financial: 401k Match | Loan Assistance  
 Work-Life: PTO | Parental Leave  
 Growth: Tuition Reimbursement | CME Allowance

Sub-section E — About Employer Section (from site profile, collapsible)

## TAB 2: APPLICANTS

Pipeline Kanban View (top) + List View (bottom, toggleable):

Kanban columns: Applied | Screened | Interview Scheduled | Offer Extended | Hired | Rejected

Each column shows: count + cumulative match score average

Cards in kanban show: Candidate name | Match% badge | 2 key tags | "Days in stage" label

Drag-and-drop between stages (with undo option, 5-second toast)

"AI Shortlist" button at top: "Recommend top 5 candidates to Screened stage" (Leo does it, recruiter confirms)

List view (toggle from kanban):

Columns: Name | Match% | Discipline | School | Graduation | Applied Date | Stage | Actions

Actions per row: [View Profile] [Move Stage ▼] [Add Note] [Send Message]

Filter above list: By stage | By match % threshold | By school | By graduation year

Special tags/badges visible on candidate cards:

 "Recommend to Hire" — preceptor-flagged

 "Prior Intern" — rotated at this facility

 "Top Match" (>85%)

 "NPTE Passed" — license confirmed

EMPTY STATE (no applicants yet):

"No applications yet. Here are [X] students who match this role and haven't applied — invite them to apply."  
Show 3 recommended candidate preview cards with [Invite to Apply] button.

### TAB 3: RECOMMENDATIONS

Two sub-sections:

- A) "Candidates Who Match But Haven't Applied" — AI-surfaced candidates from the Exxat pool  
Each card: Name (blurred if not unlocked) | Match% | Key match reasons | [View Profile] [Invite to Apply]
- B) "Past Rotation Candidates" — Students who rotated at this facility and match this job  
Same card format, but unblurred (already known to employer) + "Rotated here [Date]" badge

### TAB 4: ACTIVITY

Chronological audit log:

"Job posted by Sarah Chen · May 15, 2026"  
"Alex Chen applied · May 16, 2026"  
"Sarah Chen moved Alex Chen to 'Screened' · May 18, 2026"  
"Leo AI sent match notification to 42 candidates · May 15, 2026"  
"Job description updated by Sarah Chen · May 17, 2026"

## CURSOR PROMPT — PART 6: Candidate Repository & Profile Views

*BUILD: Candidate Repository (All Candidates)*

Route: /site/jobs/candidates

This is a centralized view of all candidates who have ever applied to or been recommended for any job at this employer.

PAGE HEADER:

Title: "Candidates"  
Summary: "214 total candidates across 6 active jobs"  
Quick Filters: "All" | "Applied" | "Recommended" | "Prior Interns" | "Recommend to Hire"  
CTA: [Export Candidates]

FILTER PANEL (left sidebar or top bar):

Search: Name, email, school, skills  
Discipline (multi-select)  
Graduation Year (range slider: 2024–2026)  
School / Program (searchable multi-select)  
State (multi-select)  
Tags (multi-select): "Prior Intern" | "Recommend to Hire" | "NPTE Passed" | "Bilingual"  
Last Application Status: Applied | Shortlisted | Interviewed | Hired | Rejected  
Match Score (slider: 60%+, 75%+, 85%+)

CANDIDATE LIST TABLE:

Columns:

Candidate (name + avatar + tags inline)  
Discipline  
School + Graduation Year  
Location  
Last Job Applied (with status chip)  
# Jobs Applied (click to open history popup)  
Match Score (best across all jobs)  
Actions: [View Profile] [Add Tag] [Send Message]

Special row treatment:

"Recommend to Hire" candidates: Subtle green left border  
"Prior Intern" candidates: Blue star icon next to name  
Hired candidates: Grayed out with "Hired ✓" chip

ROW CLICK → Opens Candidate Profile (slide-over panel or full page)

**BUILD:** Candidate Profile Page (Employer View)

Route: /site/jobs/candidates/[candidateId]

This page shows a verified, comprehensive view of the candidate as the employer sees it.

**PAGE LAYOUT:**

**LEFT PANEL (30%):**

- Profile photo + name
- Discipline + Program chips
- School, Graduation Year
- Location
- Contact: Email, Phone (click to reveal — logged as contact event)
- Availability chip: "Available June 2026"
- Tags (editable by employer — internal only)
- Quick actions: [Add to Job ▼] [Send Message] [Add Note]

**MAIN CONTENT (70%):**

Tab 1 — Overview:

"What stands out" AI card (Leo-generated, based on profile analysis):

"Alex's inpatient rehab rotation at Texas Health produces a 4.8/5 preceptor evaluation — placing him in the top 8% of PT candidates in your pipeline. His Epic EMR experience directly matches your job requirements."

Match scores by active job (all employer's jobs):

"PT - Inpatient Rehab: 92% match ♦ Strong Fit"

"PT - Outpatient: 78% match · Good Fit"

Profile summary (headline + bio)

Clinical Experience cards (from Prism rotations):

Each rotation: Site name | Dates | Practice Setting | Preceptor Evaluation summary | Skills demonstrated

[Recommend to Hire] badge shown if preceptor flagged

Education section

Skills + Certifications

Licenses (verified status + state)

Languages

Tab 2 — Application History:

Chronological table of all applications at this employer:

Job Title | Applied Date | Current Stage | Last Updated

Tab 3 — Notes & Tags (employer-private):

Free-text notes from recruiters

Tags: internal labels (visible only to employer)

Interview feedback (structured form after interview)

**VERIFICATION BADGES** throughout:

"Prism Verified" shield icon on rotation data

"License Confirmed" checkmark on licensure section

"Recommend to Hire" star on rotation where flagged by preceptor

## CURSOR PROMPT — PART 7: Enhanced Site Profile & Analytics

*BUILD: Enhanced Site Profile (Employer-Facing Public Page)*

Route: /site/profile/edit (edit view) + /organizations/[siteId] (public view for students)

**EDIT VIEW SECTIONS:**

1. Basic Info: Facility name, logo upload, website, address, phone
2. About Section (rich text, AI-enhance button): "Tell candidates about your facility, culture, and mission"

3. Specializations (chips): Acute Care | Inpatient Rehab | Outpatient | Pediatric | Geriatric | Oncology | Behavioral Health | etc.
4. Photos Gallery: Upload facility photos (max 6)
5. Key Stats: # of beds, # of employees, founded year, accreditations
6. What we offer (structured benefits chips, same as job creation)
7. Career Growth: Free text — "Describe mentorship, residency programs, professional development"
8. Social links: LinkedIn, career page URL

#### PUBLIC STUDENT-FACING VIEW:

- Hero section: Cover photo + logo + facility name + specializations
- About section
- Key stats (beds, employees, accreditation badges)
- "Jobs at [Facility Name]" section (all active jobs listed)
- "Students from your school who rotated here" if applicable (personalized)
- Reviews / preceptor quality signals (future feature)

#### BUILD: Analytics Page (Optional Phase 2)

Route: /site/jobs/analytics

Three tabs: Job Performance | Candidate Pipeline | Market Insights

#### JOB PERFORMANCE TAB:

- Date range selector
- Filterable by job
- Metrics: Views, Clicks, Applications, Interview Rate, Offer Rate, Accept Rate
- Funnel visualization (Exxat DS funnel chart component)
- Top and bottom performing jobs table

#### CANDIDATE PIPELINE TAB:

- Discipline mix donut chart
- School concentration bar chart (top 5 feeders)
- Geographic heatmap (SVG-based, Exxat DS map component if available)
- Pipeline stage distribution over time

#### MARKET INSIGHTS TAB (Leo-powered):

- "PT demand in Dallas exceeds local supply by 3x — consider hybrid/relocation incentives"
- "University of UT Southwestern contributes 28% of qualified PT applicants"
- "Your application-to-hire rate is 18% above industry benchmark"
- Salary benchmarking by discipline and geography

#### BUILD: Notification System (Throughout Product)

Notification types (show in bell icon dropdown + email digests):

- "New application: Alex Chen applied to Physical Therapist - Inpatient Rehab"
- "Leo found 3 new candidate matches for your PT job"
- "Your job 'PT - Outpatient' expires in 5 days — renew?"
- "A prior intern from your facility just activated their job search profile"
- "Alex Chen (Recommend to Hire) is now available to start"
- "Weekly digest: 8 new matches, 12 applications, 2 interviews scheduled"

#### EMAIL DIGEST TEMPLATE:

- Weekly (default) or Daily (opt-in)
- Shows: Jobs stats + top matches + action items
- Each item links directly to relevant page
- Unsubscribe/frequency settings in profile

## CURSOR PROMPT — PART 8: Data Model & API Structure

*Define the data models and API endpoints needed for the employer-side product:*

DATABASE MODELS (TypeScript/Prisma schema style):

```
// Job Posting
type Job = {
  id: string;           // Public-facing Job ID (e.g., "EX-2026-PT-0042")
  siteId: string;       // Foreign key to Site/Employer
  title: string;
  discipline: Discipline; // Enum: PT | OT | SLP | NURSING | PA | RT | RADIOLOGY | ALLIED
  jobType: JobType[];    // Enum: FULL_TIME | PART_TIME | CONTRACT | PER_DIEM
  location: JobLocation; // { city, state, country, lat, lng }
  salaryRange?: SalaryRange; // { min, max, frequency }
  description: JobDescription; // { summary, responsibilities, requirements, environment }
  benefits: BenefitChip[];
  screeningQuestions: ScreeningQuestion[];
  applicationMethod: 'EXXAT' | 'ATS_REDIRECT' | 'EXTERNAL_URL';
  externalApplyUrl?: string;
  atsSource?: ATSSource; // { atsName, atsJobId, syncedAt, feedUrl }
  status: JobStatus;     // DRAFT | PUBLISHED | PAUSED | CLOSED | ARCHIVED
  visibility: 'PUBLIC' | 'PARTNERS_ONLY';
  hiringStatus?: 'FILLED' | 'PARTIALLY_FILLED';
  expiresAt?: Date;
  autoCloseOnHire: boolean;
  createdBy: string;     // User ID
  publishedAt?: Date;
  closedAt?: Date;
  tags: string[];        // Internal site-only tags
  jobEmbedding?: number[]; // Vector embedding for AI matching
  createdAt: Date;
  updatedAt: Date;
}

// Candidate Application
type Application = {
  id: string;
  jobId: string;
  candidateId: string;
  status: ApplicationStatus; // APPLIED | SCREENED | INTERVIEW | OFFERED | HIRED | REJECTED
  matchScore?: number;       // 0–100, AI-computed
  appliedAt: Date;
  lastUpdatedAt: Date;
  screeningAnswers?: ScreeningAnswer[];
  documents: ApplicationDocument[];
  recruiterNotes: RecruiterNote[];
  recruiterTags: string[];
  stageHistory: StageHistoryEntry[];
}

// Candidate (New Grad / Student) — Employer View
type CandidateEmployerView = {
  candidateId: string;
  name: string;
  discipline: Discipline;
```

```

school: string;
programName: string;
graduationYear: number;
location: CandidateLocation;
contact: ContactInfo;      // Revealed on explicit recruiter action
rotationHistory: RotationSummary[]; // Prism-synced
isRecommendToHire: boolean; // Any preceptor flagged this
isPriorIntern: boolean;     // Rotated at this employer
licenses: License[];
certifications: Certification[];
skills: Skill[];
matchScores: { jobId: string; score: number; }[];
candidateEmbedding?: number[]; // AI matching vector
availability: AvailabilityInfo;
prismVerified: boolean;
openToWork: boolean;
}
// Rotation Summary (from Prism)
type RotationSummary = {
  siteId: string;
  siteName: string;
  practiceSetting: string;
  startDate: Date;
  endDate: Date;
  discipline: Discipline;
  preceptorEvaluation?: PreceptorEvaluation; // { overallScore, competencyScores, recommend: boolean }
  isAtThisEmployer: boolean; // True if rotation was at the current hiring employer
}
API ENDPOINTS TO IMPLEMENT:
// Jobs
GET  /api/site/jobs      — List all jobs (paginated, filtered)
POST /api/site/jobs      — Create job
GET  /api/site/jobs/:id  — Get job details
PUT  /api/site/jobs/:id  — Update job
PATCH /api/site/jobs/:id/status — Change job status
DELETE /api/site/jobs/:id — Archive job
GET  /api/site/jobs/:id/analytics — Job performance analytics
GET  /api/site/jobs/:id/candidates — All applicants for this job
// Applications
GET  /api/site/jobs/:id/applications — List applications
PATCH /api/site/applications/:id/stage — Move to stage
POST  /api/site/applications/:id/notes — Add note
POST  /api/site/applications/:id/tags — Add tag
// Candidates
GET  /api/site/candidates — All candidates (repository view)
GET  /api/site/candidates/:id — Candidate detail (employer perspective)
// Recommendations (AI)
GET  /api/site/jobs/:id/recommendations — Leo-recommended candidates not yet applied
GET  /api/site/dashboard/insights — Leo AI insights for dashboard
// ATS Integration
POST /api/site/ats/connect — Connect ATS account
POST /api/site/ats/sync — Trigger ATS job sync

```

GET /api/site/ats/sync/status — Check sync status  
// Analytics  
GET /api/site/analytics/overview — Dashboard metrics  
GET /api/site/analytics/jobs — Job performance analytics  
GET /api/site/analytics/pipeline — Candidate pipeline analytics

## CURSOR PROMPT — PART 9: Component Specifications & Micro-interactions

### *COMPONENT SPECIFICATIONS FOR EXXAT DS COMPLIANCE:*

#### 1. MATCH SCORE BADGE COMPONENT

Props: score (number 0-100), size ('sm' | 'md' | 'lg'), showLabel (boolean)

Color system:

90-100: #22C55E (green) + "Perfect Fit" label

80-89: #3B82F6 (blue) + "Strong Fit" label

65-79: #F59E0B (amber) + "Good Fit" label

<65: #6B7280 (gray) + no label

Display: Circular progress ring + percentage number + label below

Animate ring fill on mount (0 → actual score in 600ms)

#### 2. CANDIDATE CARD COMPONENT (Job Pipeline / Recommendations)

Props: candidate, matchScore, showActions, variant ('kanban' | 'list' | 'recommendation')

Content:

Avatar (initials fallback)

Name + discipline chip

School + graduation year

Match score badge (top-right corner)

Tag row: "Recommend to Hire" (green star) | "Prior Intern" (blue rotation icon) | "NPTE Passed" (checkmark)

Rotation highlight: "Trained at [Site Name]" with building icon

Bottom actions: [View Profile] [Move Stage ▼] (visible on hover)

Hover state: Subtle elevation + action buttons appear

#### 3. LEO AI INSIGHT CARD COMPONENT

Props: insight (string), type ('info' | 'warning' | 'opportunity'), cta (string + href), dismissible (boolean)

Visual: Blue-to-teal gradient left border (4px) + Leo avatar (star/sparkle icon) in top-left

Animation: Slides in from right on mount, fades out on dismiss

Types:

'info': Blue border, informational (neutral observation)

'warning': Amber border, action needed (underperforming job, expiring soon)

'opportunity': Green border, upside opportunity (new match found)

#### 4. JOB STATUS CHIP COMPONENT

Values: Active | Draft | Paused | Closed | Archived

Colors:

Active: Green bg (#D1FAE5) + green text (#065F46)

Draft: Gray bg (#F3F4F6) + gray text (#374151)

Paused: Amber bg (#FEF3C7) + amber text (#92400E)

Closed: Red bg (#FEE2E2) + red text (#991B1B)

Archived: Gray bg (#E5E7EB) + gray text (#6B7280)

#### 5. ATS SOURCE BADGE COMPONENT

Props: atsName ('iCIMS' | 'Workday' | 'Greenhouse' | 'Lever' | 'Bullhorn' | 'SmartRecruiters')

Visual: Small pill with ATS logo (SVG) + name text

Tooltip on hover: "Synced from [ATS Name] · Last updated [timestamp]"

Color: Neutral/gray with ATS brand accent

## 6. PIPELINE KANBAN COMPONENT

Props: stages (StageConfig[]), candidates (Application[]), onMove (callback), onCardClick (callback)

Features:

- Horizontal scroll on mobile
- Stage column headers: Stage name + count badge + average match score
- Drag-and-drop (using @dnd-kit/core)
- Drop zone highlights on drag
- Undo toast (5 seconds) after stage move
- "AI Shortlist" button in Applied column header

### MICRO-INTERACTIONS TO IMPLEMENT:

#### 1. Job Creation Success:

- Confetti burst (subtle, 1-second) + "🎉 Job is live!" banner
- Estimated reach stat animates in: "~340 matching students in Dallas"

#### 2. New Application Received (real-time):

- Toast notification slides in: "New Application: Alex Chen · 92% match · PT position"
- Notification bell badge increments with pop animation

#### 3. Match Score Reveal:

- When employer views a candidate for the first time, match score ring animates 0→score
- "Leo analyzed 12 data points to calculate this score" tooltip

#### 4. Stage Move (Kanban):

- Card lifts with drop shadow on drag
- Destination column glows on hover
- After drop: card slides into column, brief success color flash
- Toast: "Alex moved to Screened · Undo"

#### 5. AI Insight Expansion:

- Leo card collapses to one-liner by default
- Click to expand → reveals full insight with supporting data
- Expand animation: smooth height transition

#### 6. Empty State → First Job:

- Animated illustration (SVG, Exxat DS character)
- After creating first job: Dashboard populates with animated count-up on KPI cards

### DATA VISUALIZATION SPECIFICATIONS:

#### 1. Engagement Bar Chart (Dashboard):

Use: Recharts BarChart

Bars: Views (Exxat blue #005BBB), Applications (green #22C55E)

Benchmark line: Dashed gray line for industry avg

Responsive: Adjusts column count based on viewport

#### 2. Pipeline Funnel (Analytics):

Use: Custom SVG funnel or Recharts Funnel

Stages: Views → Clicked Apply → Applied → Screened → Interviewed → Hired

Percentage labels at each transition

#### 3. Discipline Mix Donut (Analytics):

Use: Recharts PieChart

Colors: Each discipline has a distinct brand-aligned color

Center label: "Total Candidates" count

Legend: Discipline name + % + count

#### 4. Geographic Heatmap (Analytics - Future):

Use: React Simple Maps or Leaflet

State-level heat for candidate concentration

Tooltip: "Texas: 142 candidates"

## CURSOR PROMPT — PART 10: Performance, Accessibility & Quality Checklist

*Before shipping, ensure all employer-side pages pass the following checklist:*

### PERFORMANCE:

- ☐ Dashboard KPI cards load within 500ms (use Suspense + skeleton loaders from Exxat DS)
- ☐ Jobs list view uses virtual scrolling for >50 rows (use @tanstack/virtual)
- ☐ All images use next/image with appropriate sizes
- ☐ API calls use SWR or TanStack Query with appropriate cache TTLs:
  - Dashboard metrics: 5-minute cache
  - Candidate list: 2-minute cache
  - Real-time notifications: WebSocket or 30-second polling
- ☐ Job creation form uses optimistic UI — job appears in list instantly before API confirms
- ☐ Kanban drag-and-drop is 60fps (use CSS transforms, not position)

### ACCESSIBILITY (WCAG 2.1 AA):

- ☐ All interactive elements have visible focus states (Exxat DS focus ring)
- ☐ Match score badges have aria-label: "Match score: 92%, Strong Fit"
- ☐ Kanban drag-and-drop has keyboard alternative: Select card → Arrow keys to move stages
- ☐ Color is never the ONLY indicator of status (always pair with text/icon)
- ☐ Modal dialogs trap focus correctly and restore on close
- ☐ Toast notifications are announced by screen readers (role="alert" aria-live="polite")
- ☐ All form fields have associated labels (not just placeholder text)
- ☐ Data tables have proper th scope attributes and caption

### ERROR STATES:

- ☐ Network error on job creation: Inline error banner + retry button, form data preserved
- ☐ ATS sync failure: Clear error message + manual sync option + support link
- ☐ No candidates found: Informative empty state (not just "No results")
- ☐ Session timeout: Graceful redirect to login with return URL preserved

### LOADING STATES:

- ☐ Dashboard: Skeleton loaders for all KPI cards (Exxat DS Skeleton component)
- ☐ Candidate list: Skeleton rows (5 rows) while loading
- ☐ Job details: Progressive loading — header loads first, tabs load on demand
- ☐ AI Insights: Streaming response animation (dots pulsing while Leo "thinks")

### MOBILE RESPONSIVE BREAKPOINTS:

- ☐ Dashboard: KPI cards stack to 2x2 grid on tablet, 1-column on mobile
- ☐ Jobs list: Hide less-critical columns on mobile (keep: Title, Status, Applications)
- ☐ Kanban: Horizontal scroll with sticky stage headers
- ☐ Candidate card: Full-width on mobile with bottom action sheet

### FINAL QUALITY CHECKLIST:

- ☐ All pages have meta titles and descriptions (for internal navigation SEO)
- ☐ All API endpoints have proper error handling with meaningful HTTP status codes
- ☐ All database queries use indexes on: siteld, jobld, candidateld, status, discipline
- ☐ All user-generated content (job descriptions, notes) is sanitized before storage
- ☐ All candidate contact info access is logged for compliance audit trail
- ☐ TypeScript strict mode enabled — no any types in business logic
- ☐ All Exxat DS components used correctly per SKILL.md specifications
- ☐ Integration tests for critical flows: create job, submit application, move pipeline stage

## Appendix: Quick Reference

### A. Healthcare Discipline → Role → Practice Setting Map

|                                 |                                          |                                                                         |                                                            |
|---------------------------------|------------------------------------------|-------------------------------------------------------------------------|------------------------------------------------------------|
| Physical Therapy (PT)           | Physical Therapist, PTA                  | Outpatient, Inpatient Rehab, Acute Care, Home Health, School-Based, SNF | NPTE License, BLS, Dry Needling, CSCS                      |
| Occupational Therapy (OT)       | Occupational Therapist, COTA             | Acute Care, Outpatient, Pediatric, SNF, School-Based, Mental Health     | NBCOT Certification, BLS, Hand Therapy                     |
| Speech-Language Pathology (SLP) | Speech-Language Pathologist              | Hospital (acute, rehab), Schools, Outpatient, SNF, Early Intervention   | CCC-SLP, BLS, FEES Certification                           |
| Nursing                         | RN, LPN                                  | ICU, ED, Med-Surg, OR, L&D, Oncology, Home Health, Outpatient           | NCLEX-RN, BLS, ACLS (for ICU/ED), Specialty Certifications |
| Physician Associate (PA)        | PA-C                                     | Primary Care, Emergency, Surgical First Assist, Specialty Clinics       | PANCE Exam, DEA Registration, State License                |
| Respiratory Therapy (RT)        | Respiratory Therapist                    | ICU, Neonatal ICU, ED, Pulmonary Rehab, Home Health                     | CRT/RRT credential, NBRC, BLS, NRP                         |
| Radiology / Imaging             | Rad Tech, CT Tech, MRI Tech, Sonographer | Hospital Radiology, Outpatient Imaging, Urgent Care, Mobile Imaging     | ARRT Certification, State License, BLS                     |

## B. Employer Hiring Evaluation Parameters (Priority Ordered)

|                        |                            |            |                                                             |
|------------------------|----------------------------|------------|-------------------------------------------------------------|
| P1 (Eliminator)        | License/Eligibility        | Hard       | Must be licensed or NPTE-eligible in posting state          |
| P1 (Eliminator)        | Graduation Date            | Hard       | Most programs: within 19 months of cohort start             |
| P1 (Eliminator)        | Accreditation              | Hard       | CAPTE, ACOTE, ASHA CAA, CCNE depending on discipline        |
| P1 (Eliminator)        | Work Authorization         | Hard       | US work authorization required                              |
| P2 (Strong Preference) | Practice Setting Match     | Soft-Hard  | Rotation experience must include relevant setting           |
| P2 (Strong Preference) | Geographic Availability    | Soft       | Within commute range or willing to relocate                 |
| P3 (Differentiator)    | Prior Rotation at Facility | Soft       | Strongest predictor of cultural fit and acceptance rate     |
| P3 (Differentiator)    | Preceptor Evaluation Score | Soft       | Verified via Exxat Prism — uniquely reliable signal         |
| P3 (Differentiator)    | Recommend to Hire Flag     | Soft       | Preceptor endorsement — gold standard for new grads         |
| P4 (Nice to Have)      | Specific EMR Experience    | Soft       | Epic, Cerner, Meditech — trainable but valued               |
| P4 (Nice to Have)      | Bilingual Capability       | Soft       | High value in Spanish-speaking markets (Texas, Florida, CA) |
| P4 (Nice to Have)      | Specialty Certifications   | Soft       | Dry needling, ACLS, Hand Therapy — discipline-specific      |
| P5 (Compensation)      | Salary Expectations        | Contextual | Must align with hospital's new-grad pay band                |

|                 |                           |            |                                                      |
|-----------------|---------------------------|------------|------------------------------------------------------|
| P5 (Scheduling) | Shift/Weekend Flexibility | Contextual | Critical for inpatient roles requiring 24/7 coverage |
|-----------------|---------------------------|------------|------------------------------------------------------|

### C. ATS Integration Priority Matrix

|                    |                               |                                    |               |
|--------------------|-------------------------------|------------------------------------|---------------|
|                    |                               |                                    |               |
| iCIMS              | ~25% of large health systems  | XML Feed + REST API + Webhooks     | P1 — MVP      |
| Workday            | ~20% of large hospitals       | REST API (limited external access) | P1 — MVP      |
| Greenhouse         | Growing mid-market            | Harvest API + Job Board API        | P2 — Post-MVP |
| Lever              | Mid-market                    | REST API + Webhooks                | P2 — Post-MVP |
| Bullhorn           | Staffing agencies             | REST API                           | P3 — Future   |
| SmartRecruiters    | Mid-enterprise                | REST API + Webhooks                | P2 — Post-MVP |
| PeopleSoft / Taleo | Legacy large hospital systems | XML Feed / Polling API             | P3 — Future   |
