12. Appendix	21

1. Overview

Product Vision:

To evolve Exxat One into a unified professional network for allied healthcare education — enabling students, schools, and clinical sites to collaborate, discover, and act across placements and job opportunities through a single connected platform.

Core Problem:

Currently, placements (clinical rotations) are fully school-managed, limiting student autonomy. Students can only take actions on confirmed placements, and post-graduation, they lose access and visibility into career opportunities. Clinical sites and employers, meanwhile, lack efficient, integrated ways to source talent.

Goal:

Transform Exxat One into a true network that supports both school-driven and self-driven pathways — where students can:

- Discover and apply for **placements (clinical rotations)**.
- Explore and apply for **jobs**.
- Seamlessly transition from student to alumni while maintaining access to relevant opportunities.

2. Target Users and Personas

- **Student / Graduate / Alumni (Individual)**
 - Role: Uses Exxat One to find placements, and jobs.
 - Needs: Simple onboarding, personalized career discovery, rich profile.
 - Motivation: Career continuity from training to employment.
- **Site Admin / Employer (Clinical Site)**
 - Role: Posts placement or job opportunities, reviews applicants, integrate with ATS.
 - Needs: Centralized posting interface, better candidate quality, reduced redundancy.
 - Motivation: Efficient, trusted sourcing from verified talent pools.
- **Preceptors/Clinical Supervisors:**
 - Role:
 - Needs:
 - Motivation:

- **School Admin / Program Coordinator**
 - Role: Student placements, verifies eligibility, tracks outcomes.
 - Needs: Visibility into both placement and job activities of students.
 - Motivation: Improve student outcomes and maintain accreditation standards.

3. Research and Insights

Market Research:

The U.S. allied healthcare workforce is projected to grow by 15–20% by 2032. According to U.S. Bureau of Labor Statistics (BLS) and NAHCR data:

- There are over **7 million allied healthcare workers** in the U.S., with **500,000+ job openings** projected annually.
- There are **over 1,000 accredited allied health programs** across the U.S., but not all are integrated with EXXAT.
- Most healthcare job placements currently happen through **generalist platforms** or **recruiters** that are not clinically contextualized or compliant with FERPA/HIPAA.

Competitor Analysis - Exxat One Network Scope Sheet.xlsx

Key Findings: Student Perspective on Finding Their First Job

- **Low Perceived Value of Profiles:**
Many students do not understand the purpose or long-term benefit of building a digital profile. They view it as an administrative step rather than a tool that can enhance their visibility to employers and improve job outcomes.
- **Lack of Data Transparency and Trust:**
Students are unsure who has access to their information and how it will be used. This uncertainty reduces their willingness to share complete and accurate data.

- **Loss of Continuity Post-Graduation:**
Access to school-managed systems (and communications linked to school emails) typically ends after graduation, creating a gap between academic completion and job search continuity.
- **Job Search Anxiety and Self-Doubt:**
Students often fear rejection or feel underqualified for available roles, especially in healthcare domains where even entry-level positions demand prior clinical exposure.
- **Unclear Differentiation and Positioning:**
Students struggle to understand how to stand out among peers with similar educational backgrounds, credentials, and limited experience.
- **Overwhelming Job Search Ecosystem:**
With multiple channels (career fairs, external job boards, school networks, etc.), students find it hard to identify which platforms are most reliable and relevant to their career path.
- **Limited Transparency on Work Conditions and Compensation:**
Lack of standardized or verified information about compensation, job expectations, and benefits leads to hesitation in applying.
- **Absence of Structured Career Guidance:**
Students receive limited personalized guidance or feedback about career readiness, skill gaps, or ideal roles aligned to their interests and program specialization.
- **Fragmented Documentation and Experience Records:**
Information related to clinical experiences, certifications, and evaluations is dispersed across different systems, making it difficult for students to present a cohesive, professional profile to employers.

4. Why is this important for Exxat?

EXXAT already powers the clinical education lifecycle for thousands of students across multiple partner schools and clinical sites and is evolving its product suite into a robust, interconnected ecosystem designed to serve the full lifecycle of health science learners, educational institutions, and clinical sites which is **the next logical step for the company and aligns with its vision**

Why this is necessary:

- While EXXAT's partner ecosystem is substantial, it still represents only a **portion of the total allied health student and professional population in the U.S.**, which

numbers in the millions.

- Many **smaller schools, independent students**, seeking transitions are not on EXXAT — yet still need reliable, clinically aligned job platforms.
- Similarly, **newer or unaffiliated clinical sites** and **outpatient clinics** struggle to find qualified talent and often rely on general job boards that lack healthcare-specific focus.

5. Placements: From School-Managed to Student-Driven Discovery

The Exxat One evolution will include two primary opportunity ecosystems:

- **Placements (Clinical Rotations):** Managed opportunities within school networks, now with added student discovery and application capabilities.
- **Jobs:** External employment opportunities managed directly between candidates and sites/employers.

While discovery is needed for both placements and Jobs, workflows might differ.

Critical Items to Discuss:

A. Private vs Public

Option 1: Open for Prism students for March release and then scale it to public users in the subsequent phase

Pros:

- Verified candidate data, instills trust
- Simpler integration & experience

Cons:

- Confined user base (limited reach)

Option 2: Open for public from day 1

Pros:

- Wider talent pool
- Better employee value proposition

Cons:

- Managing access, verification and data governance could lead to compliance hurdles/difficulties
- Public users may not have verified educational or clinical data, reducing trust

B. Login

The login use cases mentioned below covers both public and private access for students.

Use Cases:

- **PRISM Students who are new to Exxat One (Meaning: Students are on Prism but have not accessed Exxat One)**
 - login via PRISM Exxat one entry point
 - Land on the Exxat One onboarding journey --> complete their setup
 - Land on Exxat one network

Edge Case: If these students come via login.exxat.com as per current setup they will not be presented with option to join Exxat One. To solve this we will have to enhance the login page to include Join Exxat One as an option which when clicked will take user to the sign-up page.

- Sign-up page
 - Provide Email (school email preferable)
 - Select School from the dropdown
 - System checks if the school exists in Prism
 - If Yes, we can mimic the invite claim flow here which means take user to the same journey that exists today on invite
 - Once signed-up, they will be taken to the onboarding setup --> One network
 - If No, treat the student as independent/public profile and ask for password, first name, last name --> continue to onboarding setup--> One network
- **PRISM Students who exist on Exxat One - (Meaning: Students who exist on Prism and have also got the invite to join Exxat One via their schools and have joined)**
 - These students will have their Exxat One login already setup
 - They can either login via PRISM Exxat one entry point or via login.exxat.com
 - Land on the Exxat One onboarding journey --> complete their setup
 - Land on Exxat one network
- **Students who are new to Exxat One (and not on PRISM) - (Meaning: Students who are not on Prism and also are not on Exxat One either because they have not yet accepted the invite or are completely new to Exxat platform)**
 - They should have access to the sign-up page from the, product website and other marketing channels as part of promotion ('Join the Exxat One Network' or 'Create your Exxat one profile') along with a sign-up option present on the login page (login.exxat.com) as well
 - Sign-up page
 - Provide Email (school email preferable)
 - Select School from the dropdown
 - System checks if the school exists in Prism
 - If Yes, we can mimic the invite claim flow here which means take user to the same journey that exists today on invite
 - Once signed-up, they will be taken to the onboarding setup --> One network
 - If No, treat the student as independent/public profile and ask for password, first name, last name --> continue to onboarding

setup--> One network

Aligned approach on login discussed in the call:

Via login.exxat.com (central login):

Proposal: Keep 'Create Account' on the login.exxat.com page for the users who do not have Exxat One account.

Conclusion Point:

- Providing Create Account on the central login page could confuse users since Prism as of today do not have any self-serve sign-up process.
- As we are working on giving Exxat one student app a new feel, that should reflect on the exxat one login pages as well.
- The login flow concluded was as below:
 - Students can login via PRISM Exxat one entry point
 - Accept TnC --> Land on Exxat one home page
 - If the users come via login.exxat.com as per current setup they will not be presented with option to join Exxat One. To solve we have to enhance the login page to make product selection as the first step for the students.
 - Student can select Prism or One based on their needs
 - If Prism is selected --> student should be navigated to Prism specific login
 - If One is selected --> student should be navigated to One specific login
 - User will enter their email and click on next --> system will check if they have existing Prism account --> trigger authenticate via Prism flow --> user verifies themselves using Prism creds --> Accept TnC --> Land on Exxat one home page
 - If the user does not have Prism account system will prompt user to create account for Exxat One (Create Account journey is detailed below). The create account page can also be accessed if user directly clicks on Create Account on the exxat one login page
- Create Account Journey
 - User lands on create account page via the exxat one login page --> create account CTA
 - Provides Email (school email preferable)
 - Select School from the dropdown
 - System checks if the account exists in Prism
 - If Yes, trigger authenticate via Prism flow --> user verifies themselves using Prism creds --> Accept TnC --> Land on Exxat one home page
 - If No, treat the student as independent/public user and ask to setup the password and provide first name, last name, graduation year -->
 - Accept TnC --> Land on Exxat one home page

Other Discussion Points

- Also discussed on whether to have product led or journey led navigation in the app. Since the product led approach suits us the most because of the different use cases and personas each product caters to, it was concluded that we should follow product led journey.
- After login user should land on the Exxat One home page which should consist of:
 - Exxat One pitch

- Profile completion nudges
- Entry points for all personas but student app should be the hero of the page
- Access to all the products (My Schedules, Jobs, etc) should be via this page.
- Clicking on each of the product should lead user to that product page
- For Jobs and open clinical placements, it was discussed and concluded that we should have more open approach towards promoting the platform so that adoption can be increased and hence it is necessary to keep the explore Jobs page common for logged-in and non-logged in users. The same view can then be extended to clinical placements in the future.

C. Profile

Exxat One Network Scope Sheet.xlsx

D. Recommendations

Student side:

- Recommended jobs personalised based on the profile match percentage
- Recommended jobs by organisation

Site side:

1. Recommended candidates by Job post and profile match:

A. Discipline

B. Career preferences

C. Skills

D. Clinical experience (with more prominence given to rotations done at the site who is posting the job)

These recommendations will help employers find better prospects for their postings and also provide them ability to add them to the pipeline.

E. Integrations

Prism Integration – Required to import profile data of students from Prism

ATS Integration: (Benchmark for Jobs.xlsx)

1. Job posting through ATS

Exxat fetches active job postings from connected ATS accounts (via API or file feed) and displays them on the Exxat Jobs portal, linked to the employer profile.

Ways to do it:

- a) Via direct API integrations with ATSs
- b) Job board connector (via middleware like Paragon//Workato)

MVP Scope

- Support 2 major ATS used by our clients
- Fetch **active published jobs** via API/Feed (Pushed by Employer on Exxat or periodic fetch by Exxat from ATS) using XML feed
- Basic fields sync:
 - Job title
 - Job ID
 - Location
 - Department
 - practice setting
 - JD
 - salary range
 - posting date
 - link to ATS (direct URL to access ATS job page or employer career page)

Future Scope

- Real-time sync rather than periodic fetch
- Support job expiration updates, edits real-time
- Support all major ATSs
- Bi-directional job creation (Exxat → ATS, for future)

2. Candidate application

Ensure that applications made via Exxat Jobs for ATS-linked employers are accurately reflected in the employer's ATS system.

Ways to do it:

- Application Redirect
 - For jobs synced from ATS → Exxat displays “Apply on Company Site”.
 - When clicked, the candidate is redirected to the employer's ATS-hosted job page.
 - Exxat logs a click-out event for analytics but does not own the application record.
- *Note: This is suited for MVP because:*
 - Less technical dependency on ATS.
 - No candidate data sharing needed.
 - Easiest to maintain.
- Application Relay (Apply via Exxat)
 - Candidate applies *within* Exxat (*upload resume, profile auto-fill, etc.*).
 - Exxat sends this application data via ATS's “**Candidate Creation**” API.
 - ATS creates a new applicant record tied to that specific job.
 - ATS returns a reference ID (e.g., candidate ID or application ID) which Exxat stores.
 - Exxat can later query ATS for status updates (if permissions allow).
- *Note: This can be build in future scope when the platform matures because:*
 - The employers who use ATS to centrally manage their recruitment wants to track the application and maintain candidates in their ATSs (some ATS may limit the external application creation as well)

- High technical dependency

3. Filters on Exxat to differentiate job posts from ATS

Help users identify jobs originating from ATS vs. manually created on Exxat.

Ways to do it:

- Tags or filters to classify Job source as Exxat/ATS/External (If we scrape) (**MVP**)

G. Onboarding experience discussion points:

- Welcome screen for the users – a brief on what can they expect inside the new and enhanced one Exxat One network experience
- Basic details needed to give recommendations even if the profile is not complete:
 - Discipline
 - Desired role/title
 - Desired location
 - Professional skills (discipline wise) - taxonomy
- Profile import options:
 - Prism data import
 - Consent
 - Show the fields that are imported
 - option to review and edit
 - Resume/linkedin pdf export
 - PDF parsing to fill profile
 - Option to skip

Figma

H. Exxat One Student App IA

- Navigation pane
- Jobs home
- My Jobs

I. Recommendations

- Recommendations :
 - Recommended result will be sorted by order of relevance. It will be decided by following key factors:
 - Profile match
 - Job preferences
 - Desired role
 - Desired location
 - Experiences – clinical and professional (professional exp will not be relevant from first job perspective)
 - Skills/Area of Interest
 - Licenses/Certifications
 - Location (address of the user if provided or available)
 - Recency of posting
 - Network affinity (sites partnered with school), preferred school

Note: The recommendations can be shown in multiple sections by location (user's location and their preferred location), interests (skills, areas of interest,

rotations, work exp (if applicable)).

- Recommended orgs
 - Recommended result will be sorted by order of relevance which will be decided by following key factors:
 - Profile match
 - Job preferences
 - Desired role
 - Desired location
 - Experiences – clinical and professional (professional exp will not be relevant from first job perspective)
 - Skills/Area of Interest
 - Licenses/Certifications
 - Location (address of the user if provided or available)
 - Students who have done the rotation at the org
 - Recency of posting
 - Network affinity (sites partnered with school in case of Prism student)

Match %	Tag	Example Description
90-100%	Perfect Fit	"Your profile matches all requirements."
80-89%	Strong Fit	"You meet most criteria for this role."
65-79%	Good Fit	"You meet many of the important requirements."

J. Search Community/Profile Discoverability:

6. User Stories and Specifications

6.1 Login & Access Flow

User Story:

As a user (student, site, or school admin), I want to access Exxat One via a unified login portal and be able to choose my role and product access so that I can manage all my activities within a single ecosystem without multiple credentials.

- Access login.exxat.com
- Enters Username
- System checks the product eligibility
- If have access to both Prism and One, show both options
 - User selects Prism, enters password and logs in
 - User selects One
 - Option to login as School, Site or Student/Individual should be presented
 - If a user is accessing School or Site, it will be a role-based access, and they will see only details permitted for their role.
 - Once they access the platform based on their roles, they will be asked to create the organisation profile (Site Profile/School Profile)
Note: Option to create individual profile should not be given at this point since it could lead to multiple profile being created
 - If the user chooses student/individual access, system identifies them as the existing student and provision the onboarding for them
 - If student exists on Prism, they should be provided a way to import their Prism profile details
 - In the user chooses student/individual access and system could not identify the user, they will be asked to sign-up and create their profile on public network

Sign-up Page:

- Sign-up page for individuals will come into the picture only when system could not identify the user with their given email ID(username)
 - Sign-up page will ask for email Id preferably school email ID of the user and the password along with the basic profile details like name, school name and prompt to fill rest of the details in the onboarding journey

Specs:

- Single login portal (login.exxat.com) for all user roles.
- Product eligibility check (Prism / ExxatOne).
- Role selection screen (School, Site, Student/Individual).
- Sign-up page for new students
- Alumni transition triggered automatically upon graduation date.

6.2 Onboarding Experience**User Story:**

As a new user, I want a guided onboarding flow that pre-fills my profile from existing Exxat data or lets me create a new one so that I can quickly start exploring opportunities without manual setup.

Onboarding setup:

For Prism users - The setup will ask for basic details to map user's career preference followed by profile import options

For non-prism options - The setup will ask for basic details to map user's career preference followed by manual profile creation.

Acceptance Criteria:

- PRISM data auto-imports for students.
- Site profile pre-populated with existing institution data.
- Resume upload and LinkedIn profile export as PDF options for profile filling.

- Clear progress indicators for incomplete profiles.

Specifications:

- **What:** Dynamic onboarding flow per user with Ai-driven autofill and validation.
- **Why:** Reduces friction and ensures accurate, verified profiles.
- **How:** PRISM API integration, resume parsing engine, dynamic prompts based on missing data.

Profile Setup

The idea is to collect the required information from the user for job recommendations first and then prompt them to fill the other profile data

- Career Preferences
 - Discipline
 - Desired Job roles
 - Preferred location
- Desired skills
- Other profile data like work exp, certifications, etc (can be filled later as well)

Your Career Goals Page

This page will have three sections as follows:

- Discipline
 - Type Lookup (Type to search and add) - we will use the same lookup we have currently
 - Once selected, it will be added as a chip which user can remove by clicking on it

- Roles or Title
 - Lookup (Type to search and add) as per below master table

Discipline	Clinical Roles / Titles
Physical Therapy	Physical Therapist, Physical Therapy Assistant
Occupational Therapy	Occupational Therapist, Occupational Therapy Assistant
Speech-Language Pathology	Speech-Language Pathologist
Nursing	RN, NP, Nurse Midwife, Nurse Anesthetist, Specialty RNs (Critical, Emergency, etc.)
Physician Assistant	PA (general), Specialty PAs (Cardio, Surgical, Emergency, etc.)
Respiratory Therapy	Respiratory Therapist, Pediatric/Neonatal RT, Critical Care RT, Pulmonary Rehab Specialist
Radiology / Imaging	Radiologic Technologist, CT Technologist, MRI Technologist, Sonographer, Radiation Therapist, Radiology PA
Support / Allied Health	Anesthesiologist Assistant, Athletic Trainer, Audiologist, Lab Techs, Phlebotomist, ECG Tech, Dietitian, Genetic Counselor, Pharmacy Tech, Medical Assistant, Music/Recreation Therapist, Chaplain, etc.

- Once selected, it will be added as a chip which user can remove by clicking on it
 - User can add min 1 and max 5 roles at once
- Preferred location
 - Global list fetched by open source API (For ex -nominatim's Search API) - no maintenance overhead on Exxat One
 - Placeholder to type City, State or Country will be there but user will not be restricted to type anything since the global search API will ensure the lookup reacts to user's search and present relevant values
 - Once user selects a search result, in the backend system should extract the city, state, country and pin code for better matching

Desired Skills : Discipline-wise UI vs. Taxonomy

Physical Therapy (PT / PTA)

UI Suggestions:

- Manual Therapy
- Therapeutic Exercise
- Gait Analysis
- Patient Assessment
- Patient & Family Education
- EMR Documentation
- Neuromuscular Re-education
- Balance Training

Taxonomy (examples):

- Manual Therapy → Dry Needling, Joint Mobilization, Soft Tissue Mobilization, Myofascial Release, Trigger Point Therapy, Taping
- Therapeutic Exercise → Strength Training, Endurance Training, Flexibility, Post-operative Rehab Protocols
- Gait Analysis → Prosthetic/Amputee Gait, Post-Stroke Gait, Return-to-Sport Testing
- Patient Assessment → ROM, MMT, Functional Outcomes (Oswestry, LEFS, FOTO, NDI)
- EMR Documentation → Epic, Cerner, Meditech, Allscripts
- Balance Training → Vestibular Rehab, Fall Prevention, Dynamic Balance Testing

Occupational Therapy (OT / COTA)

UI Suggestions:

- ADL / IADL Training
- Cognitive Rehabilitation
- Sensory Integration
- Splint Fabrication
- Work Hardening & Ergonomics
- Vision Rehabilitation
- Patient & Family Education
- EMR Documentation

Taxonomy:

- ADL/IADL Training → Self-care, Dressing, Feeding, Cooking, Community Mobility
- Cognitive Rehabilitation → Memory Training, Attention, Problem Solving, Executive Function
- Sensory Integration → Autism Therapy, Sensory Diets, STAR/SIPT Certification techniques
- Splint Fabrication → Hand Splints, Resting Splints, Custom Orthoses
- Vision Rehabilitation → Low Vision Training, Visual Motor Integration, Driving Rehab
- Work Hardening → Return-to-Work Programs, Ergonomic Assessment
- Patient & Family Education → Home Safety Training, Adaptive Equipment Use

Speech-Language Pathology (SLP)

UI Suggestions:

- Dysphagia Management

- Speech/Language Therapy
- Voice Therapy
- Cognitive Communication
- AAC (Augmentative & Alternative Communication)
- Pediatric Feeding
- Trach/Vent Communication
- EMR Documentation

Taxonomy:

- Dysphagia Management → MBSS, FEES, VitalStim, Diet Modifications
- Speech/Language Therapy → Aphasia, Apraxia, Language Development
- Voice Therapy → LSVT LOUD, Resonant Voice, Stroboscopy Interpretation
- Cognitive Communication → Memory, Problem Solving, Executive Functioning
- AAC → Device Programming, iPad Apps, Picture Exchange Systems
- Pediatric Feeding → Oral-motor Therapy, Developmental Feeding Milestones
- Trach/Vent Communication → Speaking Valves, Communication Boards

Nursing (RN / LPN)

UI Suggestions:

- Patient Assessment
- Medication Administration
- IV Therapy

- Wound & Ostomy Care
- Vital Signs Monitoring
- EMR Documentation
- Care Planning & Coordination
- Infection Control

Taxonomy:

- Medication Administration → IV Push, Oral, IM, SubQ, Chemo Administration
- IV Therapy → Peripheral IV, Central Line, PICC Line, Port Access
- Wound & Ostomy → Dressing Changes, VAC Therapy, Ostomy Care, Pressure Ulcer Prevention
- Patient Assessment → Head-to-Toe Exam, Neuro Checks, Cardiac Monitoring
- Care Settings → ICU (Ventilator Management, Drips), ED (Triage, Trauma Care), OR (Scrub/Circulate), L&D (Fetal Monitoring, NRP), Oncology (Chemo Cert, OCN)
- EMR Documentation → Epic, Cerner, Meditech
- Infection Control → Isolation Precautions, Hand Hygiene, PPE Protocols

Physician Associate / Assistant (PA)

UI Suggestions:

- Patient Assessment & Diagnosis
- History Taking & Physical Exam
- Minor Procedures
- Lab & Imaging Interpretation
- Care Planning & Coordination

- Prescribing & Medication Management
- EMR Documentation
- Patient Education

Taxonomy:

- Minor Procedures → Suturing, Incision & Drainage, Joint Injections, Splinting
- Lab/Imaging → X-ray, CT, MRI, Bloodwork, ECG Interpretation
- Care Planning → Primary Care, Surgical First Assist, Chronic Disease Management
- EMR Documentation → Epic, Cerner, Allscripts
- Prescribing → DEA Controlled Substances, Antibiotic Stewardship

Respiratory Therapy (RT)

UI Suggestions:

- Ventilator Management
- Airway Management
- ABG Sampling & Interpretation
- Non-Invasive Ventilation (CPAP/BiPAP)
- Tracheostomy Care
- Oxygen Therapy
- Pulmonary Function Testing
- EMR Documentation

Taxonomy:

- Ventilator Management → Adult, Pediatric, Neonatal Modes (SIMV, AC, CPAP)

- Airway Management → Intubation Assist, Suctioning, Emergency Airway
- ABG → Sampling, Analysis, Interpretation
- PFTs → Spirometry, Diffusion Studies, Lung Volumes
- Tracheostomy Care → Speaking Valve, Decannulation Protocols

Radiologic/Imaging Technologist

UI Suggestions:

- X-ray Imaging
- CT Imaging
- MRI Imaging
- Ultrasound Imaging
- Radiation Safety
- Patient Positioning
- PACS & Image Management
- Contrast Administration

Taxonomy:

- X-ray → Trauma Imaging, Chest, Extremity
- CT → Contrast Protocols, Head/Abdomen/Chest CT
- MRI → Neuro MRI, Musculoskeletal MRI, Safety Screening
- Ultrasound → Abdominal, OB/GYN, Vascular, Echo (if applicable)
- PACS → Upload, Retrieval, Archiving

- Radiation Safety → ALARA Principles, Lead Shielding

Practice Setting to Skill Map - Exxat One Network Scope Sheet.xlsx

Option to import from Prism, fill via resume or manual

From Prism

- Take user's consent to import the data
- Map the profile data of PRISM to Exxat one profile
- Import and prefill the relevant section in exxat profile
- Users can review and edit the information to complete the profile

Via Resume

- Upload resume
- Map the data from resume to the exxat profile
- Fetch the data and prefill the relevant section in exxat profile
- Users can review and edit the information to complete the profile

Manual Creation

Full Profile View:

Profile will be divided into sections (categories) as below and each category will have the respective attributes as mentioned in our attribute sheet.

- Personal/Demographic
- Clinical / Rotation Experience (Multiple)

- Address Information
- Professional Summary
- Areas of Interest
- Professional Skills
- Language Proficiency
- Education (Multiple)
- Work Experience (Multiple)
- Membership
- Licensure
- Accomplishments
- Resume
- Career Preferences
- Profile completion checklist
 - All the categories should be part of the checklist
 - Completion percentage will be determined by the number of categories filled divided by total categories
 - Once a category is filled, it will be denoted by the green tick
 - User can click on any of the categories that are not filled from the checklist and start filling that
- Preferences
 - Job alerts toggle – if user toggles this on, they will receive the notifications

for jobs matching their criteria

- Visibility settings – access to the privacy settings page for the user where they can decide what information they want to show to the non-logged in users
 - Page Link

6.3 Student App Revamp – Navigation

User Story:

As a student or alumni, I want a unified home dashboard showing my placements, job activities, and personalized recommendations so that I can easily track progress, discover new opportunities, and manage my career from one place.

Specs:

- Unified “Home” tab displaying placement and job sections.
- Personalized AI recommendations.
- “Ask Leo” chat assistant available for queries.

6.4 Placement Module

User Story:

As a student, I want to search for and apply to available clinical placements made open by my school or affiliated sites so that I can proactively secure my required rotations while maintaining academic compliance.

Acceptance Criteria:

- Student sees placements based on school and site permissions.

- Applications received via school will follow the existing process
- Applications submitted move to “Pending Approval” in case of site posted opportunities.
- School/Site admins receive notifications for each application.
- Approval/denial notifications reflected in student dashboard.
- Approved placements move to “Confirmed” list.

6.5 Jobs Module

User Story:

As a student or alumni, I want to discover, save, and apply to relevant job opportunities so that I can find employment aligned with my qualifications and experience.

Description:

Section 1: Discovery

Sub Section 1: Type to discover

AI powered search and discovery making it convenient for the user to just type in sentences and fetch results tailored to their needs.

The search will work on NLQ (natural language querying) - AI will parse the prompt given by user and apply necessary filters to show the job results.

Pre-defined query:

Entry-level physical therapist jobs in outpatient clinics
Physical therapy jobs accepting new graduates

Note: These pre-defined queries can also be modified based on user search history

Section 2: Recommended Jobs

Sub Section 1: Personalised Recommendations

- Recommended result will be sorted by order of relevance which will be decided by following key factors:
 - Profile match % (Job preferences, experiences – clinical and professional , skills, discipline, location (address of the user if filled))
 - Recency of posting
 - Network affinity (sites partnered with school)
- Recommendation card details:
 - Job title
 - Employer name
 - Job location
 - Fit tag

Match %	Tag	Example Description
90-100%	Perfect Fit	"Your profile matches all requirements."
80-89%	Strong Fit	"You meet most criteria for this role."
65-79%	Good Fit	"You meet many of the important requirements."

- Some important chips - highlighting the key information of the job post if available like compensation, employment type (full time, part time, etc), practice setting, experience level (fresh graduate, entry level, experienced).

Sub Section 2: Recommended orgs to work for

- Recommended result will be sorted by order of relevance which will be decided by following key factors:
 - Profile match % (Job preferences, experiences, skills, discipline, location (address of the user if filled))
 - Recency of posting

- Placement information
- Network affinity (sites partnered with school) and preferred partner
- Recommendation card details:
 - Site name – on click site profile
 - # of locations
 - # of openings
 - Experience range
 - Compensation range
 - User's rotation completion note if available – like "you have completed your rotation with 'site name' 3 months ago"

Section 3: More Jobs

- Jobs shown in this section will be decided and sorted by following factors:
 - Discipline/domain should be same
 - Profile match % less than 65%
 - Recency of posting
- Card details
 - Same as recommended section except the fit tag

Section 4: Career Guidance

This section is targeted for the students who are not sure how to prepare or how to land their first job. They need structured career guidance and help.

To start with we can put 2-3 blogs on following topics to help them:

- Article on how to how to build the first resume (we can be discipline specific)
- Blogs on skill sets that employers look for in fresh graduates
- Any other suggestions

We can put all these blogs using chat gpt and inside the blogs use hooks to bring them back to the Jobs page.

Section 5: View/All Jobs Page

When user clicks on View All or put their search query in the discover box they will be taken to this page where according to the source where they have come from they can see the filters pre-applied along with the Jobs listing.

Job Listing:

- Left side Job cards with the similar information as homepage will be there
 - For each card the right hand side will be the details of that particular job with following sections:
 - Job title, employer name, location
 - Ability to save jobs to apply later
 - Ability to Apply
 - Application can be a redirection to external system or can be done on Exxat as well
 - If Application is done externally, the job details sections will show some metrics like
 - Number of views on that job
 - Number of interests shown (proxy is people

clicking on apply)

- If Application is happening on Exxat
 - Once applied the CTA Apply will change to applied
 - Metrics shown will be # of View, Interests and applied since we will have this information
 - Status of the job application
- AI powered insights
 - Summary of JD posted by employer
 - Strong matches
 - Recommended prep for structured guidance
 - Nudge to complete the profile on the base of AI insights
- JD posted by employer as is
- Benefits extracted from JD
 - The benefits will be shown in the following buckets:
 - Health benefits - Insurance
 - Wellness benefits – wellness coach
 - Loan assistance
 - Retirement benefits
 - Life insurance

- Leave benefits
- Parental benefits – maternity/paternity, child care, daycare ,etc.
- About employer section
 - Will be populated based on the details filled by employer in their profile
 - If not filled will be fetched using open AI integration
- Every job listing page will also have option to enable the toggle for alerts so that if user wants to save their preferences, filters selected and get the alerts matching this requirement they can get that.

Section 6: My Jobs Page

All the applied and saved jobs can be accessed from this section.

The job cards on this page will have basic info:

- Job title
- Location
- Employer name
- Status of the application if applicable

When user clicks on any of the job card in applied section:

- A separate page with job details page will open with the current status of the application (this page will be same as view jobs page minus the listing)

When user clicks on any of the job card in Saved section:

- A separate page with job details page will open with the current status of the application (this page will be same as view jobs page minus the listing)

- If the job is still available, user can apply
- If the job is no longer available, user will see the message that this job is no longer taking applications or has expired

6.6 Site-Side Job Flow

User Story:

As a site admin, I want to create job postings, view applicant data, and sync applications with my existing ATS so that I can manage recruitment seamlessly without duplicate data entry.

Description:

<to be added>

6.7 Profile & Role Transition

User Story:

As a student nearing graduation, I want my Exxat One account to automatically transition to alumni mode using my personal email so that I retain access to my career history and job discovery features after leaving school.

Acceptance Criteria:

- Automatic alumni status trigger post-graduation.
- Access to placement history retained (read-only).
- Full access to Job discovery and application flows
- Personal email setup prompt.

Specifications:

- **What:** Role transition framework to shift users between student, alumni, and professional states.

- **Why:** Ensures lifelong platform engagement and data continuity.
- **How:** Graduation event triggers status change in ExxatOne; permissions updated; onboarding email sent for alumni reactivation.

7. Integrations

Integration Type	Description
ExxatOne	Profile Data
Prism	Student profile data import
ATS (Workday, Bullhorn, Lever)	Job posting sync + candidate tracking
Email & Push	Job alerts, status updates

8. Instrumentation

<to be included>

9. Notification Requirement

- Jobs Digests and Recommendations

<to be included>

10. Success Metrics

Metric	Target
% of students exploring self-driven opportunities	x%
% of active sites posting at least one job	x%
% of students completing onboarding	x%

11. Appendix

- ~ About 15% of students remain undecided about their preferred career path as they graduate.

Source : <https://pmc.ncbi.nlm.nih.gov/articles/PMC10463921/>

- Studies show that providing structured career guidance—such as interview prep materials, career guides, and industry insight—significantly increases students’ confidence, clarity, and ability to make informed decisions.

- On average, new grads apply to 23 jobs before getting hired—the process can be long and discouraging.

sources: <https://www.indeed.com/career-advice/finding-a-job/student-job-search-guide>

- Job search anxiety is heightened by “information overload” from digital platforms, uncertainty about authenticity, and confusion over what matters most (“Should I keep filling out more profiles?”)
